

Look to Cloud Computing for the Future of Software

World-Class Products Delivered as a Subscription Service

Microsoft® Online Services

Combine the power of rich desktop-based applications with the flexibility of fully-hosted Internet services and you get Microsoft® Online Services. Software services are run on a global network of world-class data centers protected by multiple layers of security and operational best practices.

Latest Productivity Capabilities

- Discover the latest in business-class e-mail, Web conferencing, instant messaging, document collaboration and workflow
- Get the benefit of the latest messaging and collaboration features, designed to work together seamlessly
- Build a solution with individual services or purchase an integrated suite

Ease of Use

- Provide end users with a unified experience to access all of the hosted services you're using
- Manage subscriptions and configure Online Services in one place
- Securely access the service anywhere without the need for a VPN connection and through a wide selection of mobile devices

Privacy & Rapid Disaster Recovery

- Access your services through secure Internet protocols including HTTPS and HTTP over SSL
- Operate on a redundant network architecture capable of disaster recovery

Greater Flexibility

- Run some applications internally and others as hosted services
- Quickly enhance or expand your IT capacity by adding new services without having to deploy new hardware and software
- Free valuable IT resources from routine management tasks to focus on core business initiatives that can deliver a true competitive advantage

You can integrate services with Microsoft Products you have already licensed. With Microsoft Online Subscription Program (MOSP), you can quickly subscribe, rapidly deploy services, and manage your licenses using an online management tool.

Microsoft Online Services run on a global network of world-class data centers

Get Total Protection with Total Ease

Protect and Secure Your Existing E-mail System

Google Services

Keep your current e-mail infrastructure and add e-mail security and archiving services, powered by Postini. Google services are delivered in a software as a service (SaaS) model, saving money and IT resources because there is no hardware to install or maintain.

Google Message Discovery

Google Message Discovery service captures message data at the gateway so that **you never have to worry** about managing message synchronization, losing information, or searching multiple data repositories.

With the Google Message Discovery service, leave your storage capacity planning to Google. You can add or remove users and change archive policies through Web-based administrative access without worrying whether you have enough disk space to support their needs.

Google makes it easy to keep up with the every-changing landscape and company growth without committing to a costly infrastructure. Best of all, there are no storage limits to how much data you can store in your archive.

Google Message Security

Google Message Security provides highly effective inbound and outbound e-mail security for organizations of all sizes. It simplifies the task of managing security and compliance of e-mail messages and frees up valuable IT resources.

Google Message Security is always on and always current, so you are assured of having effective and reliable protection for your e-mail at all times.

Leveraging a patented, on-demand architecture, Google Message Security blocks spam, phishing, viruses, and other e-mail threats before they reach your organization, reducing load on your e-mail servers, conserving bandwidth and improving the performance of your existing messaging infrastructure.

Maintain the Integrity of Your Electronic Communications

MessageLabs Services

MessageLabs is the world's leading provider of hosted messaging and web security services. Processing billions of e-mail connections, web requests and instant messages daily, **MessageLabs services protect, control, encrypt and archive electronic communications for businesses at a low, predictable cost.**

Benefits of MessageLabs Services Include:

- **Clean Internet pipe** into and out of your organization
- **Security and confidentiality** of all your electronic communications and data
- **Protection of your network** against downtime and disruption
- **Compliance** with legislation and acceptable use policies
- **Effective** risk management and control
- **Affordable, predictable cost**
- Services are **easy to configure and manage**

MessageLabs services are the most convenient and cost-effective way of reducing messaging and web-related risks. Because they are fully managed, they help eliminate the need for you to keep investing in in-house expertise and infrastructure.

- Web Security Services is a **cost-effective**, fully managed service that provides your network with **non-stop protection from infection**
- Email Anti-Spam Service uses **innovative techniques** to **free your organization from the time-wasting, network-burdening, efficiency-eroding effects of unsolicited e-mail**
- Email Anti-Virus Service featuring Skeptic™ technology provides **100% protection from known and unknown viruses**
- Email Content Control Service enables you to **proactively address the issues** of confidential, malicious or inappropriate e-mail content
