

Zones Earns Microsoft Solutions Partner Designation for Infrastructure, Security, and Modern Work.

Exciting news! In our partner maturity efforts with Microsoft, Zones has achieved ‘Security Solutions Partner Designation’ and ‘Specialization for Modernized Endpoints’.

This announcement comes shortly after Microsoft decided to make a few substantial shifts to its partner program, replacing its legacy Gold and Silver membership competencies with ‘Solutions Partner’ designations.

As we continue to increase our existing solutions and services portfolio, these designations are a testament to Zones’ mastery in delivering best-in-class services across key Microsoft solution areas: Modern Work, Security, and Azure Infrastructure.

As a proud Microsoft Solutions Partner, we have been actively serving the business community in myriads of digital avenues. From migrating infrastructure workloads to cloud, to safeguarding customers with integrated security and identity solutions, Zones has always remained at the forefront of digital transformation.

To further enhance the experience and cater to our customers’ evolving needs, we focus on achieving more Microsoft designations and specializations to provide customers with the tools they need to achieve their business goals. As of November 9th, we have secured three key specializations:

- Azure Virtual Desktop Specialization
- Modernize Endpoints Specialization
- Cloud Security Specialization

“By giving our customers premium access to Microsoft technology, we facilitate them to apply scalable solutions to their business problems that boost ROI and propel their digital transformation journey,” said by Johnson Tey, Brand Manager of Microsoft at Zones.

For more than 25 years, Zones and Microsoft have been working side by side, offering innovative solutions that empower business productivity, boost security, and support an agile and energized workplace. Through our broad IT expertise, we strive to expand our solution areas by attaining more partner designations – demonstrating Microsoft’s trust and our proven IT capabilities to the global business community.
