## ESET Security for Kerio

### SYSTEM REQUIREMENTS

#### Operating systems

Microsoft® Windows® Server 2012, 2008 R2, 2008, 2003 and 2000

Microsoft Small Business Server 2011, 2008, 2003 and 2003 R2

#### Supported versions of Kerio products:

Kerio Connect 7.4.x and newer

Kerio Control 7.4.0, 7.4.1 and 7.4.2

Visit [www.eset.com/us](http://www.eset.com/us) for information about support of older Kerio Control and Kerio Connect versions.

ESET Security for Kerio provides proactive malware protection by scanning email and web traffic processed by Kerio Connect or Kerio Control applications. It also protects the Windows server host from malware, based on advanced scanning features found in ESET File Security for Microsoft Windows Server.

### WHAT IT DOES

#### Antivirus and Antispyware

Antivirus and antispyware plugins for Kerio Connect (SMTP and POP protocols) and Kerio Control (HTTP and FTP protocols).

A single scanning engine services all scanning requests from Kerio Connect and Control.

Provides full-fledged server-as-client protection.

Powered by the advanced ThreatSense® technology combining speed, accuracy and minimal system impact.

#### Remote Administration

Fully supported by ESET Remote Administrator.

#### Windows Installation Dual Support

Only one ESET installation required when both Kerio Connect and Kerio Control are installed on the same server.

#### Smooth Operation

Integration allows you to customize your security settings via the Kerio administration console or from the ESET console.

Automatically cleans or deletes any infected object's attachments.

Downloads updates from the Internet or from a local mirror server.

Automatically detects and excludes critical server files not at risk for malware from scanning to improve system performance.

Set up scanning rules to filter files by name, size and real file-type—to help improve performance.

### REPORTING AND ALERTS

#### SysInspector

Identifies all running processes, installed software and hardware configurations, and generates an easy-to-understand color-coded risk report. With simple clicks you can compare two reports to identify changes to your system over time.

#### Enhanced Log Viewer

Search and sort log file entries with ease.

#### Real-Time Notifications

Visible status alerts identify infiltrations such as malware, potentially unwanted applications (including adware and toolbars) and potentially unsafe applications (with certain security risks).
