

# Enterprise Mobility Management Suite from CA Technologies

CA Management Cloud for Mobility extends its leadership in enterprise management, security and scalability to solve challenges for managing mobile devices, apps, content, and email within the enterprise. CA Management Cloud for Mobility features the Enterprise Mobility Management Suite (EMM) as a fundamental component.

The EMM suite enables enterprises to enable employee productivity and satisfaction by simplifying the management and security of devices, applications, content and email. The EMM suite will drive cost savings, enable mobile productivity and secure enterprise infrastructure simply and effectively. The suite is modular in nature so apps can be implemented together or as stand-alone. In addition, the EMM Suite is leveraging CA Technologies leading product portfolio to create strategic integration with other products.

EMM is powered by the industry's only Smart Containerization™ technology. Unlike traditional device-focused mobility management techniques, Smart Containerization™ allows enterprises to manage the security, compliance and support characteristics of devices, applications, content or email while preserving the quality of the mobile user experience.

## CA Mobile Device Management (CA MDM)

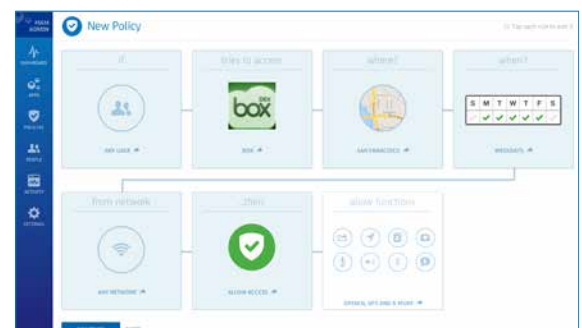

CA MDM allows IT to auto configure, manage, and enforce applications and configuration policies on tablet, smartphone, and personal computer (PC) configurations. CA MDM is a scalable, SaaS and on-premise solution. It provides:

- Near real-time device status and control across popular smart phones, tablets, and desktop PCs.
- Over the air (OTA) policy and configuration management.
- Telecom expense reporting and analytics that works across the EMM suite.
- A user-friendly Enterprise App Store and policy-based application deployment.
- BYOD freedom.
- Device and app management beyond standard MDM through scripting capability.
- Proven scalability and platform coverage. Enterprise grade platform administration and security features.

## CA Mobile Application Management (CA MAM)

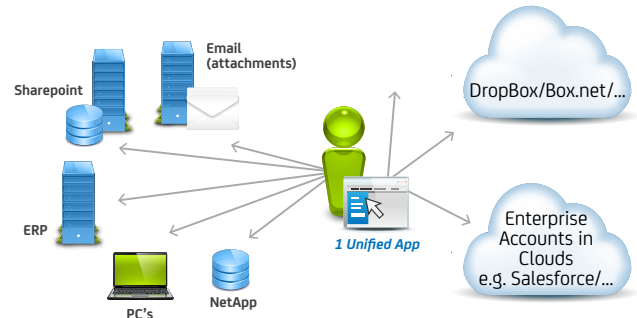

- CA MAM provides security, management and control of mobile applications with fine-grained access control policies for mobile apps. It provides:
- Control. Enforces access and usage policies for managed apps.
- Security. Provides enhanced app authentication and encryption for internal and third-party apps.
- App policy wrapping. Internal and third-party apps may be wrapped to enable CA MAM features and services without requiring code changes.

## CA Mobile Content Management (CA MCM)

CA MCM provides fine-grained security through Smart Containerization that enables content to protect itself based on its sensitivity and device characteristics. In addition, it provides file synchronization, access to enterprise content repositories and cloud store integration made available to the end user through policy-based mobile access. It provides:

- Content groups to enable virtual folders.
- No VPN required on the mobile device.
- Synchronization of designated desktop folder to cloud store.
- Collaborate over a single file or a mix of content.
- Real-time notification of activity on content or by system user actions.
- Messages with embedded links when content is shared or when a user comments.

## CA Mobile Email Management (CA MEM)

CA MEM provides users with secure access to their corporate email and ensures group and policy-based controls to protect sensitive email content. It provides:

- Integrates with native email apps for a better user experience.
- Complete email security even in the absence of an MDM solution.
- Multi-factor email authentication across all devices.
- Content-based, comprehensive policy control.
- Integration into CA DataMinder™ for policy management.
