1-CLICK BYOD WITH GOOD ENTERPRISE SUITE

THE CHALLENGE

How do you mobilize your workforce quickly while protecting company data and personal privacy on BYOD devices?

THE SOLUTION

Good Enterprise Suite is a complete, easy to deploy enterprise mobility management starter package for securing your devices and empowering your mobile users. This suite delivers mobile device management (MDM), email, contacts, calendar, docs, tasks and browsing -- all in one package. The Good Enterprise Suite delivers day one productivity for the mobile workforce while securely managing and protecting company data and respecting personal privacy. This 1-Click BYOD approach with Good Enterprise Suite is the go-to choice for businesses of all sizes, with thousands of customers worldwide.

Easy Management and Control for IT

Good Enterprise Suite delivers the speed you need to deploy mobile devices quickly and easily with the peace of mind that business data is protected. Easy for IT to implement and manage, the architecture requires only one app on the device, one secure connection to the enterprise and one server. A central, web-based console with integrated mobile device management (MDM) and mobile application management (MAM) gives you full visibility and control across your entire mobile population. You can provision new devices, enforce security policies, and remote wipe enterprise data while leaving personal data intact. Now you can manage mobile connectivity with the flexibility and granular control to support employees, part time workers, and contractors with varying access and security needs across managed and unmanaged devices. And it's easy to deploy because IT doesn't have to ask users to install and configure profiles, rather users simply download the single Good app from the iTunes, Google Play or WindowsPhone Store.

Instant Productivity and Collaboration for Users

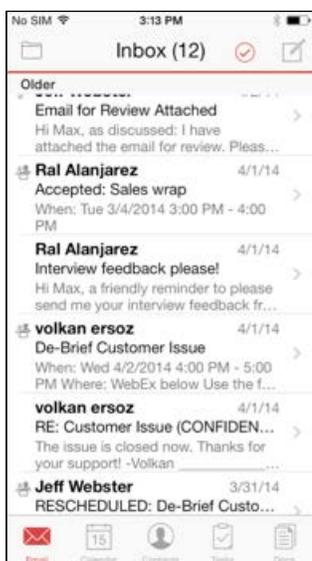

Good Enterprise Suite empowers your mobile users with secure one app access to the information they need quickly, right out of the box: email, calendar, contacts, browser and intranet access, task management and document data. With a modern, fast, fresh design, your workforce gets an intuitive, business-first experience across mobile devices running Android™, iOS™ and Windows™ Phone platforms. Mobile users can work productively no matter where they are: Search information, read and compose emails; review documents and use them when offline; connect with contacts and schedule meetings; and join conference calls with colleagues – all using their preferred device wherever they are and whenever they need it.

Comprehensive Security for the Business with Personal Data Privacy

Users are increasingly conscious of their personal privacy and potential infringement through mobile device management techniques that can see their apps, wipe personal data and track them via geo-location. The Good Enterprise Suite solves the dilemma of protecting company data and respecting user's personal privacy through next-gen containerization. Good's next-generation containerization technology provides a secure perimeter around the business apps and data on users' devices, ensuring business data stays encrypted and under IT's control while leaving the employee's personal data untouched —all on personal BYOD and corporate devices, whether managed or unmanaged. In the event a device is lost or stolen, or through employee turnover, business data can be locked and/or wiped without impacting personal data. Protection at the app level also prevents users from inadvertently leaking business data. For example, IT can prevent employees from opening files in unsecured apps by using OpenIn from email, backing up business data to personal cloud-based services, or copying and pasting business content into consumer apps or personal email. Good's patented security solutions protect business data end-to-end from data center to carrier to apps and devices with industry-leading FIPS-validated AES encryption – trusted by the world's most regulated and security sensitive organizations.

FEATURE	IOS	ANDROID	WINDOWS PHONE
1 app simplicity with unified and secure email, calendar, contacts, tasks, docs, browser	X	X	All but browser currently available
Consistent app functionality across mobile platforms	X	X	X
User experience optimized for business productivity	X	X	X
Keeps personal data and business data completely separate	X	X	X
Manages and wipes only business data, leaves personal data alone	X	X	X
Encrypt company data on the device and over the air	X	X	X
Prevent data leakage by restricting cut/copy/paste/OpenIn between apps	X	X	X
Wipe lost or stolen devices remotely	X	X	X
Detect and shut down jailbroken or rooted devices	X	X	Not applicable
Distribute apps through a secure business app store	X	X	Not currently available
Exchange server support	X	X	X
Domino server support	X	X	X
Future-proofed to extend mobile collaboration through integration with other Good-Secured apps	X	X	Not currently available
