

GOOD COLLABORATION SUITE

THE CHALLENGE

How do you securely mobilize a wide range of business apps on all your users' devices at low cost?

THE SOLUTION

Organizations need to mobilize all their core business apps. While many have focused primarily on email to date, to gain competitive advantage leading organizations are rapidly going beyond mobile email alone. According to Forrester Research¹, top mobile business tasks include document editing, access to Sharepoint and intranets, file sync, and customer relationship management. However, as organizations mobilize, IT must ensure that these critical apps and devices are as reliable as mission critical services running on laptops and desktops so key business processes are not disrupted. Meet these imperatives and more with the Good Collaboration Suite.

SECURE AND MANAGE THE MOBILE ENTERPRISE

As organizations mobilize they cannot compromise their corporate security. They must adopt a solution with layered security that protects at every level: apps, data, and devices. This includes going beyond traditional Mobile Device Management (MDM) and integrating next-gen containerization to protect all corporate data on corporate managed and BYOD devices. And this must be done simply to not increase IT burden in the face of increasing numbers of users, devices and apps. The Good Collaboration Suite provides the ease of use IT needs with the gold standard for mobile security and end user privacy:

- Protect corporate applications from leaking enterprise data outside of IT control, with policy-based app controls
- Secure enterprise data in use, at rest and in motion between apps
- Preserve end user privacy without need for intrusive geo-location or whole device wipe techniques
- Deploy and manage simply through a web based console with the option of a cloud-hosted service

ENABLE YOUR KEY BUSINESS PROCESSES

Leading organizations are using mobility as a competitive edge. It's not about mobilizing everything, but those key business processes that increase revenue, improve customer service and lower costs. This includes both existing business apps, such as customer relationship management, as well as collaborative apps. In both cases, the data created and utilized by these apps must be secured to avoid putting critical business information at risk. The Good Collaboration Suite includes the most comprehensive range of secure mobile collaboration apps and supports unlimited deployment of any of the leading third party ISV apps secured by Good. This empowers IT to:

- Improve collaboration with file and SharePoint access, instant messaging, and browsing
- Accelerate sales performance and deal management with Good for Salesforce1
- Enable core business apps such as Oracle, IBM Cognos, MicroStrategy, Box, Docusign and more

ENSURE MOBILE RELIABILITY

As users and their apps increase exponentially, mobility becomes a tier-one IT service. Yet the inherent complexity of mobility and its many components, both inside and outside the firewall, creates challenges for IT operations. IT must monitor the end-to-end service across this environment and tune it to meet performance needs. With the unique mobile service management capabilities built into the Good Collaboration Suite, IT can:

- Monitor the entire mobile estate including backend systems, mobile-specific infrastructure, proxies, firewalls, NOCs, carriers, devices and apps
- Pinpoint issues and avoid outages across the entire end-to-end mobile environment
- Troubleshoot and tune to achieve optimal performance
