ESET Mail Security for IBM Lotus Domino

Because cybercriminals frequently exploit email to spread infections and phishing scams, protecting your company's mail server is the essential first line of defense. ESET Mail Security for IBM Lotus Domino eliminates all types of email-borne threats and unsolicited email using three methods—message filtering (via SMTP), message filtering (via NRPC) and database scanning—so harmful content is blocked at the server level before it can ever reach your end users.

KEY BENEFITS

Proactively protects against viruses and other malware	ESET ThreatSense® technology uses industry-leading heuristic malware detection to keep your business data safe from known and emerging threats while restricting false positives to a minimum.
Keeps your system running fast	The optimized filtering and system maintenance leaves more processing power for server tasks, like delivering the emails that keep your business profitable. The small system footprint ensures optimal processing efficiency, maximizing server performance and extending the useful life of your hardware.
Secures mailboxes and the resident host	This is comprehensive security that has all the tools and features to protect not just Domino mailboxes, but the server itself. These include self-defense protection against unauthorized deleting or disabling of ESET Mail Security for IBM Lotus Domino or its components, web-access protection to monitor communication to and from the Internet, local email client protection and antispam.
Easy to install and set up	ESET Mail Security for IBM Lotus Domino is a simple set-and-forget solution that delivers advanced installation options as well as the ability to import/export configurations and tools for remote administration. ESET Remote Administrator enables easy deployment and management of ESET Mail Security for IBM Lotus Domino from any networked computer.

Award-winning performance

Rely on ESET, whose established track record of performance and reliability continues to win recognition from independent testing organizations, such as Virus Bulletin and AV-Comparatives. ESET leads the industry in the overall number of VB100 awards, having received its first in 1998. The prestigious AV-Comparatives tests regularly rank ESET in the Advanced+ category for its overall performance and precise detection.

SYSTEM REQUIREMENTS

System Architecture
Intel® or AMD® x86/x64

Operating Systems
Microsoft Windows® Server 2012, 2008 R2, 2008
(32-bit & 64-bit), 2003 (32-bit & 64-bit), 2000

Support for Lotus Domino
IBM Domino 9.0 Social Edition, IBM Lotus Domino
8.5.x, 8.0x, 7.0x, 6.5x

KEY FEATURES

Antivirus and antispyware	Keeps known and emerging forms of malware from entering your network via email.
On-demand database scans	Enables you to perform scheduled or on-demand scans of the Lotus Domino-hosted databases. This helps to optimize server load by scanning the data only in a selected time frame. It also adds another layer of protection, since ESET Mail Security for IBM Lotus Domino is capable of scanning not only email, but also any other content stored within the Domino database structure.
Advanced antispam with score dials	Filters out unsolicited email messages, scams, phishing and frauds. Score dials enable setting of antispam threshold levels. Enables spam rules to be set up according to country code, language, character sets and other parameters. Enables use of third-party block lists, such as RBL, LBL and DNSBL.
Centralized management	Manages all ESET products from a single console. Applies policies and rules, monitors detections and enables remote configuration from any networked computer.
Customizable rules	Allows you to set rules based on your security policies and automate email scanning and quarantine handling. Real file-type detection and filtering correctly identifies the file extensions of malware falsely labeled to evade detection and allows scanning rules to be set by extension type.
Robust quarantine functionality	Enables the creation of separate quarantine configurations for individual mailboxes.
Performance monitoring	Records system activity and enables administrators to optimize server performance.
Automatic exclusions	Automatically detects and excludes critical server files not at risk for malware to provide smooth operation.
Spam log	Displays sender, recipient, spam score, classification reason and action taken.
Greylisting	Blocks spam from non-RFC-compliant Mail Transfer Agents (MTAs) through built-in message verification, requiring messages to be sent again. Greatly improves antispam efficacy.
Greylisting log	Displays greylisted sender, recipient and action taken, and shows status until connection denial period ends.
ESHELL Command Line	Offers an alternative command tool to the GUI for those who prefer using command line. Enables you to run scripts that automatically configure, modify configuration or perform an action.
Enhanced logviewer	Search and sort the spam log and other log results with ease.
License merging	Automatically merges two or more licenses with the same customer name for simpler license management.
