An effective, efficient start

HPE Installation and Deployment Services

- Adopt new technology faster
- Deploy and expand easily
- Transition without disrupting operations
- Reduce risk, cost, and frustration

Deploy and expand easily and rapidly

An experienced service partner like HPE can help you quickly and cost-effectively get your infrastructure up and running at peak performance, enabling to quickly realize a return on your investment. HPE Installation and Deployment Services (IDS) make available to you a wealth of options, from deployment of simple rack-and-stack of discrete ISS servers, all the way to complex custom projects deployment within a distributed infrastructure environment—with a single, comprehensive framework, including the option of having the solution preconfigured and integrated in the HPE's factories, so that you save time.

Five flexible pillars that drive business results

Deployment: Installation and software configuration of your infrastructure, delivering it ready to be integrated

Relocation: Data center relocation within the current location or overseas, including insured logistic services and support recertification

Managed logistics: Enabling perfect timing between shipping and deployment locally or globally; delivering a prestaged solution

Asset disposition: Meeting compliance with the most-stringent asset disposition regulation; removal, recycling, and remarketing old products

Project management: Coordinating engagements of multiple vendors you contracted for seamless deployment of your solution

Customer Benefits

Save time and save money: Accelerate the quote to cash and have fast, smooth adoption of latest products and technologies by using HPE Factory Express and leveraging HPE's project management expertise. HPE also saves your time by offering single-point accountability.

Improve your IT efficiency: HPE can fully manage the implementation of an organization's new technologies, leaving your key IT personnel free to focus on adapting to changing market conditions and business requirements.

Control risk and cost: HPE helps you to reduce risk and cost in many ways: Starting with deployment while the products are still on HPE factory shop floor, HPE manages correct racking, installing, and tagging to have proper, hassle-free onsite management. HPE sanitizes and disposes your assets as per the compliance and regulations to avoid any data privacy issue.

Why Hewlett Packard Enterprise

Expertise: Experienced, certified experts for a range of HPE and multivendor technology

Worldwide presence: A global delivery organization with consistent delivery capability in more than 170 countries

Customized or standard offering: Flexibility with standard deliverable packages for an off-the-shelf solution, or custom services that meet your needs

Turnkey solutions: Preconfigured, pretested, and preintegrated solutions from HPE factories

Leverage HPE technology and expertise, along with longtime field experience, to make sure you start your journey on the right path.
