MaaS360[®] Secure Mail

Control enterprise email on mobile devices

Provide Secure Access to Corporate Email

MaaS360 Secure Mail delivers a secure office productivity app with email, calendar and contacts to allow employees to securely collaborate with colleagues while preserving the mobile experience on their personal devices.

As a foundational component of the MaaS360 Secure Productivity Suite, it addresses key concerns of data loss risks.

Through authentication and authorization, only approved, valid users can access sensitive emails and data. With policies to control the flow of data, you can restrict sharing by users, forwarding of attachments and copying and pasting. Devices that are lost, stolen or compromised can be selectively wiped to remove the secure email container, all attachments and profiles.

Choose the Right Approach to Securing Email

Other solutions secure email by intercepting the email stream, removing attachments and loading them in a separate application. This ultimately leads to disjointed user experiences between the native email client and standalone applications that may just provide document viewing.

MaaS360 Secure Mail works seamlessly within the MaaS360 Secure Productivity Suite to manage all emails, calendars, contacts, apps, documents and the Web from one isolated workspace on their mobile devices.

Users can stay productive with a consistent user experience from email handling to viewing, editing and sharing documents.

Contain Corporate Email

Email is still the killer app on smartphones and tablets, but can be a killer to your organization's mobile security and compliance policies, too.

MaaS360 safeguards business email and attachments to prevent corporate data leaks while keeping your employees productive on the go.

Key Features

- Secure emails (both text and attachments), calendars and contacts in a container
- Enable authentication & block unauthorized email access
- Conduct online and offline compliance checks prior to accessing email
- Leverage FIPS 140-2 compliant, AES-256
 encryption for both iOS and Android
- View attachments directly in the app
- Control where files can be copied or moved
- Restrict forwarding, moving to other apps, copying, pasting, & screen capture
- Selectively wipe attachments, even outside of email
- Work in the MaaS360 Secure Productivity Suite to store, view, edit & share content

Key Benefits

- Safely & securely support BYOD
- Separate personal & corporate data
- Reduce risk of sensitive data leakage
- Leverage single sign-on for authentication
- Enable online & offline compliance checks
- Wipe email container, enterprise profiles, or whole device
- Deliver a simple, intuitive user interface that won't slow your workers down
- MaaS360 has no access to confidential email data
- Not inline with email data with no performance or outage risks
