A simpler, more affordable approach to Big Data analytics

A simpler, more affordable approach to Big Data analytics

In an effort to address the demands for instant answers and deep analytics, today's IT landscapes have become incredibly complex. Traditional computing systems are proving unable to keep up with the explosive growth in the volume and variety of data. You need a simpler, more affordable approach to [unlock the value of all your information](#) for competitive advantage.

Vast amounts of information flow through businesses each day. The data that influences each decision grows exponentially and changes continually, adding complexity to the ways you store, manage, and interpret it. Implementing advanced technologies designed to capitalize on new sources and types of potentially valuable information can place significant strain on existing IT landscapes.

Today's business climate demands fast, accurate analytics to pinpoint new sources of revenue and streamline operations. Insufficient or

incomplete data can result in missed opportunities or lost customers. SAP understands that large enterprises are tired of paying too much to maintain and expand data warehouses, while smaller companies can't afford overblown specialty systems to analyze the vast amount of information available to them.

To benefit fully from the power of analytics, everyone needs fast answers to complex questions involving months' or even years' worth of data – reliably and affordably.

Big Data, no problem

Sensors, social networks, and online digital behavior generate vast amounts of unstructured data – Big Data – that can contain significant business value for pattern detection, predictive analytics, or e-discovery. Yet Big Data is unwieldy, making it difficult to inject everyday decisions with insights that may lie buried within these new and immense pools of data.

With SAP Sybase IQ, you can analyze Big Data quickly and efficiently, and combine it with historical and operational data for more accurate insight and decision making. Big

Data can be accessed in place or, if it makes economic sense, moved into SAP Sybase IQ for further manipulation and analysis.

A broad choice of tools makes it easier for organizations to incorporate Big Data into operational processes, including native Hadoop and MapReduce programming frameworks, Predictive Model Markup Language (PMML) support, in-database capabilities, R language support, and a library of statistical and data-mining algorithms. All of these are supported within a common analytical framework, reducing complexity for data analysts.

SAP Sybase IQ enables organizations to uncover insights from Big Data faster and with less effort for a powerful competitive edge.
