

# What's New in Veritas™ Data Insight

## User risk analysis

### Overview

80 percent of business data is unstructured data: files, documents, presentations, emails, etc. Over time, most organizations have accumulated large quantities of unstructured data. We see a growing sense of urgency to gain control of the costs associated with storing and maintaining information along with a need to reduce the compliance risks and security risks.

But where do you start? Most of the information is 'dark data', that is, data for which no one really knows who the owner is, whether it is business relevant or not.

With capacity shipped to support file-based storage expected to grow at 45.6 percent annual growth rate from 2012 through 2017, a proactive approach to governance is mandatory.<sup>1</sup> There is a clear need for automation and accountability to support large-scale data management and data protection efforts.

Veritas™ Data Insight helps organizations improve unstructured data governance to reduce costs, reduce risk, and achieve compliance through actionable intelligence into data ownership, usage, and access controls. The reporting, analytics, and visualization capabilities in Data Insight shine a light on the data by giving organizations an understanding of what data exists, how it is being used, who owns it, and has access to it.

The latest version of Data Insight introduces features that enable data governance by giving you greater insight and control over your data including:

- A user-centric lens for unstructured data—enabling administrators to monitor and track the file activity, access and behavior trends of particular employees.
- Access permissions search and tracking provide insights for access risks and compliance
- Improved data governance for Box cloud storage.

### Reasons to upgrade

- **New! User risk analysis** provide immediate insights into malicious activity and policy violations
- **New! Access permissions search and tracking** provide insights for access risks and compliance
- **New! Cloud source, Box**, that provides visibility, forensics, risk analysis and DLP incident remediation for the cloud collaboration system
- **New! Big-data analytics** provide process for advanced anomaly detection on a big-data cluster
- **Improved! Access orchestration** help in cleaning-up access and maintain permission hygiene
- **Improved! Dashboard and alerts** for quickly prioritizing areas of risk, creating user watch lists, and viewing file activity trends
- **Improved! Query interface** for advanced analysis and complex custom query needs
- **Improved! Reporting enhancements** help visualize and report on storage reclamation opportunities
- **Improved! Product operations and supportability** provides enhanced configuration options, error reporting, sizing recommendations, role based access and improved documentation

1. IDC 2013

This release also includes the following features previously introduced:

- **Records classification workflow** that enables records owners to identify documents related to a retention policy and automatically archive and classify that information into Enterprise Vault.
- **A self-service portal** allows IT and Risk/Compliance teams to engage business data owners with actionable intelligence to reduce risk of data loss, align access to business need, and verify ownership.
- **Flexible query interface** for ad-hoc analysis and custom query needs.
- **Flexible remediation framework** to implement custom data management actions and access control lockdown actions. Features native integration with Veritas Enterprise Vault™ for archiving to reduce costs and manage retention.
