

Cisco Webex Calling

Cisco Webex® Calling makes it easy to take your business to the cloud at a pace that makes sense for your business. It brings all the functionality you need for calling and collaboration together in one simple package under the Cisco Collaboration Flex Plan.

What you need to know

- Midsize and large enterprise decision makers are rapidly recognizing that managing their own on-premises PBX and PBX networks is no longer a good business decision due to inherent cost, complexity, features and functionality, security, and reliability deficiencies
- Most cloud alternatives to on-premises PBXs to date have lacked the features and functionality and trusted performance record necessary to be viable replacement options for the enterprise PBX and PBX network
- The introduction of Cisco® Webex Calling changes that, by offering a cloud-based communications and collaboration solution packed with the enterprise-grade features of a PBX, integrated with Webex Teams™ and Webex devices. And the optional add-on of Webex Meetings makes Webex Calling the most complete business-ready bundle on the market today, bearing the trusted Cisco Webex brand
- Cisco Webex Calling is delivered by certified Cisco Value-Added Reseller (VAR) channel partners through a set of geo-redundant data centers regionally distributed around the globe
- Cisco Webex Calling is offered as part of the Cisco Collaboration Flex Plan, which means it offers financial protection as you migrate any Cisco Unified Communications Manager licenses to the cloud
- Cisco Webex Calling can be used as a cloud-only solution or as part of cloud hybrid deployment when a mixed network of cloud and on-premises PBXs is required

Cisco Webex Calling is now powered by the proven Cisco BroadCloud® calling platform that is used by over 20 million business users worldwide. Organizations can now buy a fully featured, enterprise-ready cloud PBX from their preferred Cisco channel partners with confidence.

We made Webex Calling part of the Cisco Collaboration Flex Plan because Flex Plan offers a simplified, all-in-one cloud collaboration package, designed for businesses that demand sophisticated functionality with a cost structure that is easy to understand.
