

McAfee MVISION Cloud for Cisco Webex Teams

McAfee® MVISION Cloud for Cisco Webex Teams helps organizations securely accelerate their business by providing total control over data and user activity in Cisco Webex Teams

Key Use Cases

Enforce sensitive data policies in Cisco Webex Teams

Prevent sensitive data that cannot be stored in the cloud from being uploaded to Cisco Webex Teams.

Build sharing and collaboration guardrails

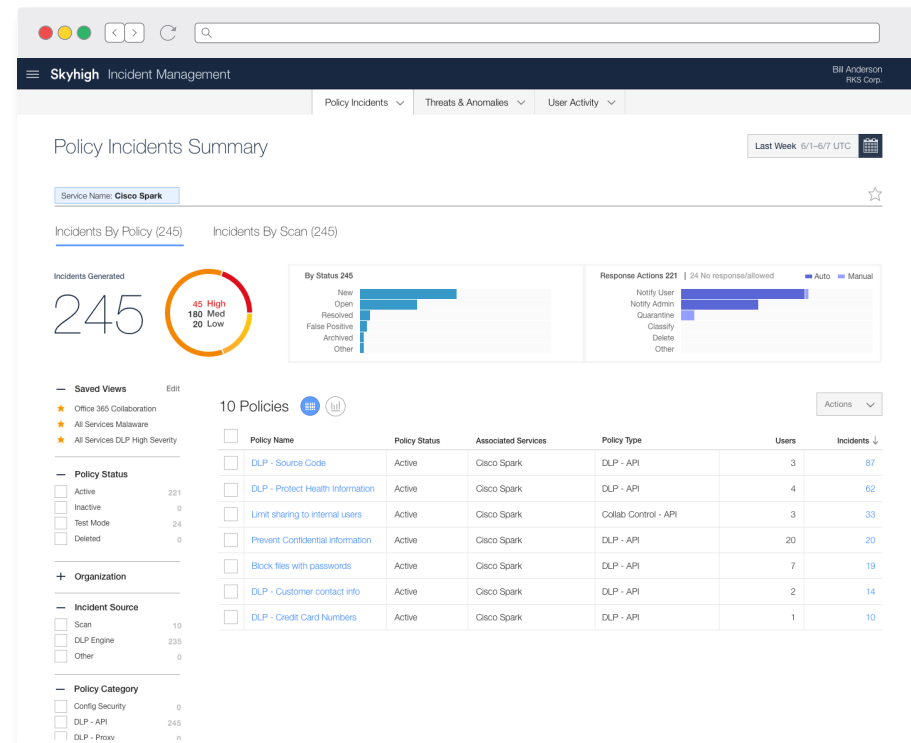

Prevent sharing of sensitive or regulated data in Cisco Webex Teams with unauthorized parties.

Perform forensic investigations with full context

Capture a complete audit trail of all user activity enriched with threat intelligence to facilitate post-incident forensic investigations.

Detect and correct user threats and malware

Detect threats from compromised accounts, insider threats, privileged access misuse, and malware infection.

Connect With Us

DATA SHEET

Data Loss Prevention (DLP)

Prevent regulated data from being stored in Cisco Webex Teams. Leverage McAfee's content analytics engine to discover sensitive data uploaded to Cisco Webex Teams based on:

- Keywords and phrases indicative of sensitive or regulated information
- Pre-defined alpha-numeric patterns with validation (e.g. credit card numbers)
- Regular expressions to detect custom alpha-numeric patterns (e.g. part numbers)
- File metadata such as file name, size, and file type
- Fingerprints of unstructured files with exact and partial or derivative match
- Fingerprints of structured databases or other structured data files
- Keyword dictionaries of industry-specific terms (e.g. stock symbols)

“McAfee's Cloud-Native Data Security technology is helping Caesars Entertainment protect our valuable company data as we move from legacy applications to cloud applications.”

—Les Ottolenghi, Executive Vice President and CIO, Caesars Entertainment

DLP remediation options:

- Notify the end user
- Notify an administrator
- Quarantine the file
- Delete the file

The screenshot displays the Skyhigh Incident Management dashboard. The main view shows a table of Policy Incidents with columns for Severity, Policy Name, Item Name, User Name, and Incident Created On. A filter for 'Service Name: 4 Service Names' is applied. A detailed view of a specific incident is shown on the right, titled 'DLP Policy Incident (#5913596) Credit Card Number/s - API'. The incident details include a match found on a file, the scan name 'DLP Cisco Spark', and the action taken as 'Allowed'. The incident response is set to 'Suppressed'.

DATA SHEET

Collaboration Control

Prevent sharing of sensitive data with unauthorized parties via Cisco Webex Teams workspaces and messages.

McAfee can enforce secure collaboration based on:

Files/folders

- Content
- Internal users/user groups
- Approved business partners
- Personal accounts (e.g. gmail.com)
- Links open to the internet
- Links accessible to internal users

“We use McAfee to layer security controls like data loss prevention and access control so that the easy path to collaboration is also the secure path.”

—Tim Tompkins, Senior Director of Security Innovation, Aetna

Common collaboration policies McAfee can enforce:

- Prevent file/folder permissions that are open to the internet or the entire company
- Revoke shared links that can be forwarded and accessed by anyone with the link
- Block file/folder sharing with personal email accounts
- Limit file/folder collaboration to internal users or whitelisted business partners
- Remove excessive owner/editor permissions of external users on corporate data

Remediate collaboration policy violations through:

- Revoking a shared link
- Downgrading permissions to view/edit
- Removing access permissions
- Notifying the end user in Cisco Webex Teams

DATA SHEET

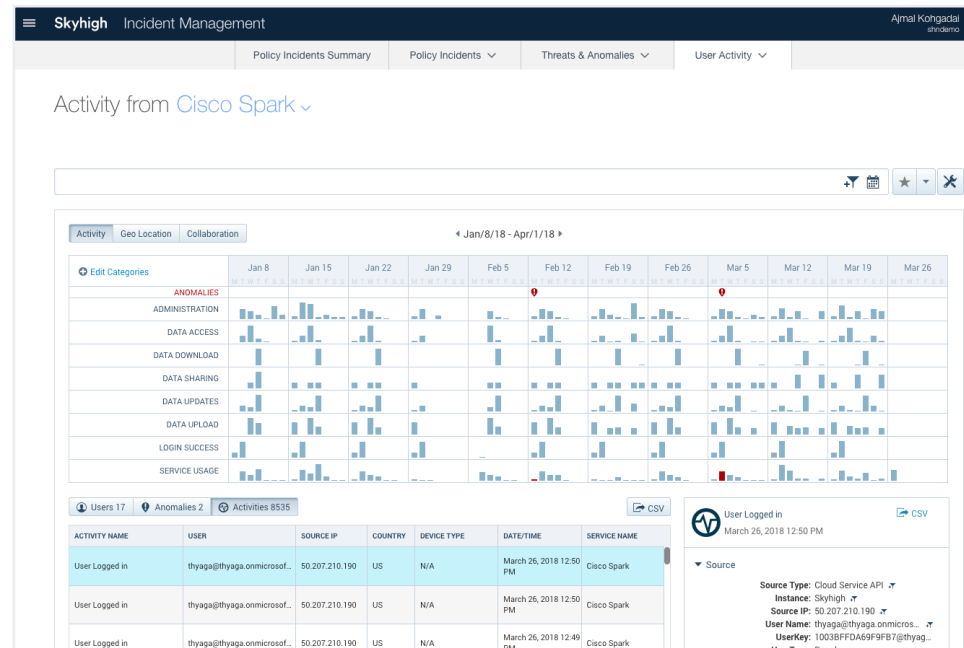

Activity Monitoring

Gain visibility into Cisco Webex Teams usage and accelerate post-incident forensic investigations by capturing a comprehensive audit trail of all activity. McAfee captures hundreds of unique activity types and groups them into 14 categories for streamlined navigation. With McAfee, organizations can monitor:

- Who is accessing Cisco Webex Teams, their role, device type, geographic location and IP address
- How much data is being shared, accessed, created or updated, uploaded, downloaded, or deleted
- Successful/failed login attempts
- User account creation/deletion as well as updates to accounts by administrators

Drill down further into activity streams to investigate:

- A specific activity and all its associated users
- All activities generated by a single user
- All activities performed by users accessing via TOR or anonymizing proxy
- All activities generated by a specific source IP address or geographic location
- All access of and actions performed on a file containing sensitive data

DATA SHEET

User Behavior Analytics and Malware Detection

McAfee uses data science and machine learning to automatically build models of typical user behavior and identifies behavior that may be indicative of a threat.

- **Insider threats:** Detect anomalous behavior across multiple dimensions including the amount of data uploaded/downloaded, volume of user action, access count, and frequency across time and cloud services.
- **Compromised accounts:** Analyze access attempts to identify impossible cross-region access, brute-force attacks, and suspicious locations indicative of a compromised account.
- **Privileged user threats:** Identify inappropriate user permissions, dormant accounts, and unwarranted escalation of user privileges and provisioning.

“In an environment with millions of unique events each day, McAfee does a nice job of cutting through the noise and directing us to the areas of greatest security concern.”

—Ralph Loura, Chief Information Officer, HP

Supervised Machine Learning

McAfee incorporates security analyst input into machine learning models to improve accuracy. As analysts mark false positives and adjust detection sensitivity, McAfee tunes detection models.

Network Effects

With the largest installed base of any cloud security solution, McAfee leverages network effects other vendors cannot replicate. With more users, behavior models are able to more accurately detect threats.

DATA SHEET

Unified Policy Engine

McAfee leverages a central policy engine to apply consistent policies to all cloud services. There are three ways to define policies that can be enforced on new and pre-existing content, user activity, and malware threats.

Policy templates

Operationalize Cisco Webex Teams policy enforcement with pre-built templates based on industry, security use case, and benchmark.

Policy import

Import policies from existing security solutions or policies from other McAfee customers or partners.

Policy creation wizard

Create a custom policy with Boolean logic to conform to any corporate or regulatory requirement.

- Combine DLP, collaboration, and access rules to enforce granular policies
- Flexible policy framework leverages triggers and response actions
- Build policies using Boolean logic and nested rules and rule groups
- Enforce multi-tier remediation based on the severity of the incident
- Selectively target or exclude specific users and define exception rules

“With McAfee we were able to implement cloud security policies without impacting business user productivity.”

—Brian Lillie, Chief Information Officer, Equinix

The screenshot displays the Skyhigh Policy Management interface. The top navigation bar includes 'Access Control', 'DLP Policies', 'Encryption Policy', 'Configuration Audit', 'On-Demand Scan', 'User Lists', and 'Policy Settings'. The main content area is titled 'Policy Templates Overview' and features a search bar and filter options. The dashboard is organized into several sections:

- Policy Type:** A list of categories with counts: Security Configur... (83), Compliance/DLP (58), and Secure Collaboration (11).
- Business Requirement:** A grid of requirements with usage and counts: Compliance (50 in use | 41), Data Exfiltration (28 in use | 22), Unrestricted Access (21), Secure Configuration (20 in use | 14), Secure Authentication (7), Secure Collaboration - Level 1 (6), Inactive Entity (5), Security Monitoring (5), and Secure Collaboration - Level 2 (4).
- Recommendation/Benchmark:** A list of benchmarks with counts: Skyhigh Recomme... (60), Best Practice (40), Skyhigh Recomme... (28), and CIS Benchmark - L... (21).

DATA SHEET

Incident Response Management

McAfee's incident response management console offers a unified interface to triage and resolve incidents. With McAfee, organizations can:

- Identify a single policy and all users violating it
- Analyze all policy violations by a single user
- Review the exact content that triggered a violation
- Rollback an automatic remediation action to restore a file and its permissions

McAfee streamlines incident response through autonomous remediation that:

- Provides end-user coaching and in-app notifications of attempted policy violations
- Enables end users to self-correct the policy violation and resolve the incident alert
- Dramatically reduces manual incident review by security analysts by 97%

Integrations

McAfee integrates with your existing security solutions including the leading vendors in:

- Security information and event management (SIEM)
- Secure web gateway (SWG)
- Next-generation firewall (NGFW)
- Access management (AM)
- Information rights management (IRM)
- Enterprise mobility management (EMM/MDM)

DATA SHEET

McAfee Sky Link

Connects to Cisco Webex Teams APIs to gain visibility into data and user activity, and enforce policies across data uploaded or shared in near real-time and data at rest.

McAfee Ground Link

Brokers the connection between McAfee and on-premises LDAP directory services, DLP solutions, proxies, firewalls, and key management services.
