

# Active Administrator for Active Directory Health

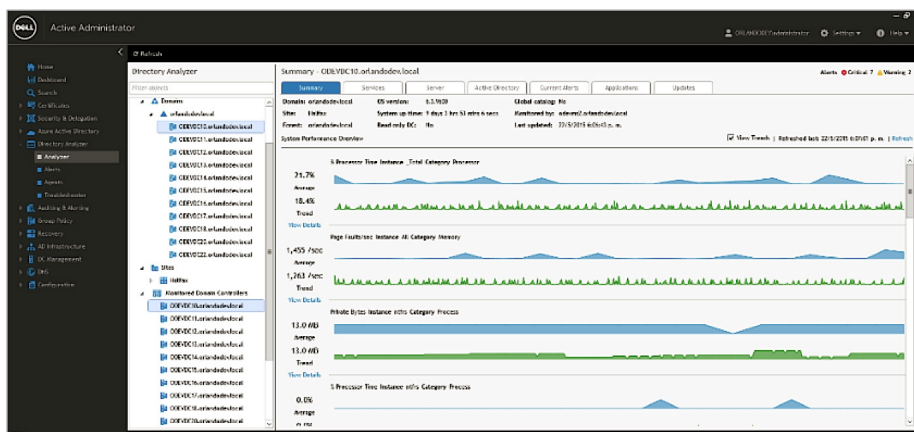

Real-time AD health and performance diagnostics tool

Active Directory (AD) issues can have wide-reaching effects, including system downtime, directory unavailability and end-user disruption. Yet, administrators have no easy way to identify resource bottlenecks, causing them to spend too much time troubleshooting and resolving problems in AD.

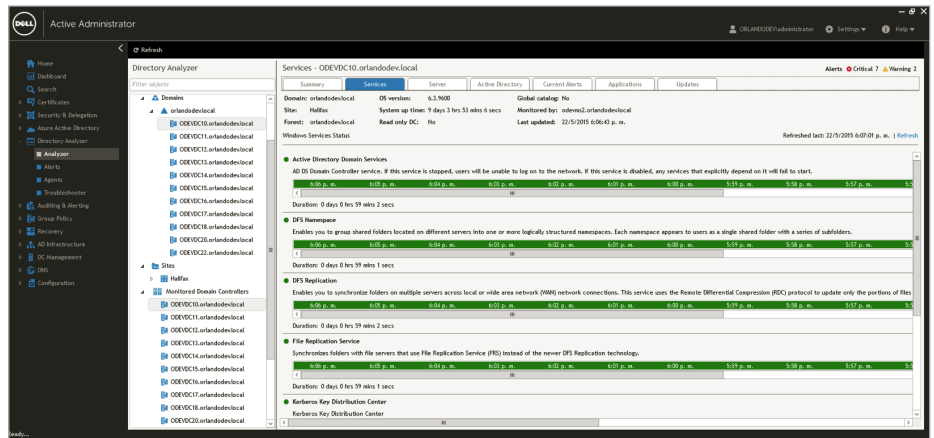

Active Administrator for Active Directory Health ensures the health and availability of AD with troubleshooting and diagnostics tools that monitor performance to maintain user productivity. With Active Administrator for AD Health, you get invaluable diagnostic data in a visual interface, eliminating the learning curve so you can identify the root cause of AD problems shortly after you deploy the solution.

Benefits:

- Speeds AD problem resolution with immediate visual feedback on the status of individual domain controllers
- Easily identifies resource bottlenecks in real time
- Analyzes performance over time to detect performance trends before they impact users
- Provides health and performance alerts and related diagnostic data in a single console to proactively resolve AD problems

Active Administrator for Active Directory Health monitors AD and alerts you when performance drops below thresholds.

Active Administrator for Active Directory Health monitors all Active Directory services and alerts you when a service is stopped.

## Features

- **At-a-glance problem identification** — View the entire AD site and replication infrastructure to see an entire forest at a glance, view issues on domain controllers and quickly automate AD problem troubleshooting. Issues are divided into severity levels, informing you of potential versus actual issues.
- **Intuitive, centralized diagnostic console** — Discover the flow of data from the network through a domain controller using flow charts, graphs and icons. In this consolidated view of system status, resource bottlenecks are highlighted in yellow and red, and you can drill down on alerts for further analysis.
- **Simplified AD analysis** — Proactively monitor and diagnose critical, directory-wide infrastructure issues from replication latency to Domain Name System (DNS) inconsistencies. When a problem occurs, an alert notifies you immediately of the exact nature and location of the problem, saving you analysis and troubleshooting time.

- **Streamlined enterprise-wide troubleshooting** — Diagnose directory problems without server-by-server, test-by-test troubleshooting using a comprehensive set of troubleshooting tests and utilities. From domain controller health to DNS and replication, Active Administrator for Active Directory Health isolates and repairs problems and generates detailed reports for current use and historical reference.
- **Automated testing and repairs** — Customize and execute more than 100 critical troubleshooting tests, including replication failure, queue length, DNS zone and SYSVOL consistency. Run multiple tests against selected domain controllers, sites, domains or naming contexts.
