Dell™ Migrator for Notes® to SharePoint®

Control and simplify your Notes-to-SharePoint migration

It's expensive and taxing to maintain IBM® Lotus Notes® applications when you're adopting new Microsoft® technologies. It makes sense to eliminate your Notes infrastructure and standardize on the Microsoft platform by migrating your applications to SharePoint®.

However, a Notes-to-SharePoint migration can be a complex and expensive project that may cause data loss, compliance concerns and IT burden, as well as reduce user productivity. And estimating migration complexity and cost is challenging, making it difficult to control the project.

Migrator for Notes to SharePoint migrates Lotus Notes, QuickPlace/ Quickr and Domino.Doc applications to SharePoint 2010/2013, Office 365® and

other hosted SharePoint environments, with high data fidelity, minimal downtime and fewer development resources than you thought possible. Migrator for Notes helps you reduce the risks of data loss and a failed project with a detailed pre-migration analysis. You'll stay in command of the transition with an intuitive project management console, while your complex applications migrate quickly and seamlessly, reducing costs and your stress level.
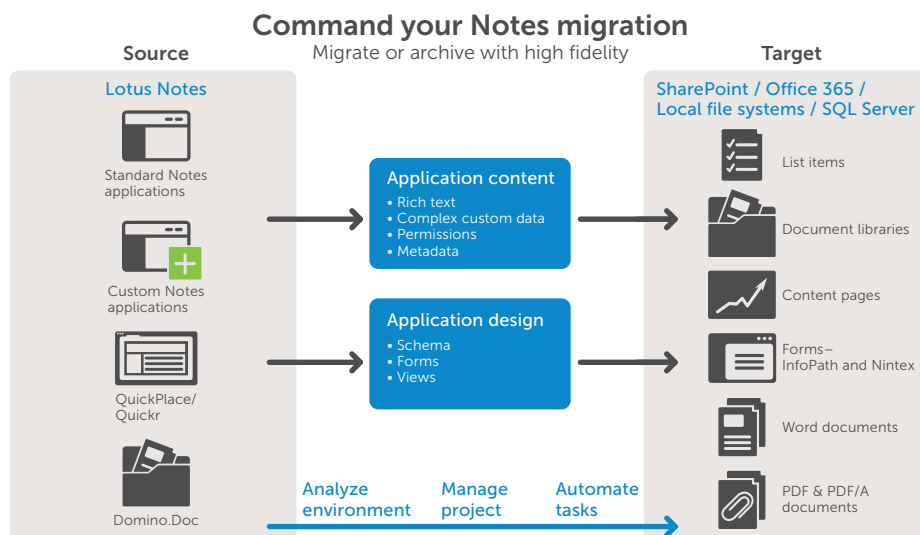

Features

Scan and plan — Migrator for Notes helps you discover Notes, QuickPlace/ Quickr or Domino.Doc databases, classify them, and analyze their design and data complexity. You'll be able to quickly determine which applications are unused and don't need to be migrated, as well as identify those that will need

"We estimated that it would have taken four months or more to migrate all the databases with our old tool. With Migrator for Notes to SharePoint, we migrated 60 databases in just one month, saving us $50,000 in time and resources."

Andy Stooker
Internet manager, Fidelity National Information Services

Benefits:
- Perform pre-migration assessments to inventory and assess applications for complexity and need
- Migrate both simple and complex applications with high data fidelity
- Use out-of-the-box SharePoint features to avoid unnecessary development when migrating Notes applications
- Stay in control of the project with intuitive management and advanced reporting features
- Migrate Notes applications to on-premises, online or hybrid SharePoint environments
- Automatically convert documents to high quality Word, HTML, PDF or PDF/A formats for fast and efficient archiving

Command your Notes migration

Source	Migrate or archive with high fidelity	Target
Lotus Notes		**SharePoint / Office 365 / Local file systems / SQL Server**
Standard Notes applications	**Application content** • Rich text • Complex custom data • Permissions • Metadata	List items
Custom Notes applications		Document libraries
QuickPlace/ Quickr	**Application design** • Schema • Forms • Views	Content pages
Domino.Doc	Analyze environment Manage project Automate tasks	Forms– InfoPath and Nintex Word documents PDF & PDF/A documents

Migrator for Notes to SharePoint migrates Notes content to SharePoint on-premises and online with high fidelity.

System requirements

Notes data extraction

Windows 2003, Windows Vista, Windows 7, Windows 8, Windows 2008, Windows 2012

Lotus Notes 8.5.3 client or higher (may connect to remote Notes 3.x and 4.x servers on any platform).

Both .NET Framework 3.5 and 4.0 installed

SharePoint data load using native SharePoint web services

Any SharePoint 2010 or 2013 server with web services enabled

SharePoint data load using Quest's import service

Windows 7, Windows 2008, Windows 2012

SharePoint 2010 or SharePoint 2013

.NET Framework 3.5

Administrator access on the SharePoint server, database and site collection

Note: This list shows only the most basic requirements; for complete requirements, please visit dellsoftware.com/products/migrator-for-notes-to-sharepoint.

development resources. The data collected during the analysis will also help you manage and automate the project.

Rules-based automation — Using the data collected during analysis, you can assign new target locations and migration jobs using a customizable rules-based engine. You can use predefined rules for standard Notes applications or define your own rules for custom applications. You can also automate hundreds of individual migration jobs, reusing design work where appropriate, to finish the migration faster and reduce the chance of error.

Easy provisioning — You can provision new SharePoint sites, sub-sites, lists and libraries automatically based on your source infrastructure, reducing IT burden. For example, you can quickly reproduce the schema of your custom Notes applications in SharePoint lists and libraries. You can reuse the custom SharePoint site and list templates you have already developed internally, or provision new targets for your migrated content from scratch.

Extreme data fidelity — Migrator for Notes to SharePoint migrates Notes rich text and complex application data with no loss in fidelity, ensuring a smooth transition experience for users. It preserves all essential data, including keyword fields, multi-valued items, nested tables, embedded objects, document metadata and security attributes. It also maintains document links and HTTP links between documents throughout the migration by redirecting users to the current location of each document, whether it is still on Notes or has already been migrated to SharePoint.

Dynamic document destinations — You can choose from a variety of migration options for applications, beyond just lists and libraries, in order to best achieve business objectives:

- Migrate to SharePoint wiki pages, basic pages and content publishing pages when users need an intuitive, page-oriented experience.

- Archive documents in a practical format while preserving the original layout and content by migrating them to Word, HTML, PDF or PDF/A.
- For applications requiring custom form layouts, migrate your Notes documents to InfoPath XML documents, Web Part pages or custom Microsoft Word templates.

Complex app accelerator — By detecting which Notes forms are being used as content types and which applications include complex data features, Migrator for Notes to SharePoint accurately determines migration requirements. Now you can:

- Rapidly search for and report on code terms within Notes databases to help better understand the application complexity.
- Make use of native SharePoint features to migrate application content without the need for scarce and expensive development resources.
- Transform Notes form designs quickly and easily to Nintex form designs, InfoPath list forms or form libraries.
- Transform Notes views to SharePoint views quickly and easily.
- Reduce complexity by migrating Notes data to SQL Server tables.
