

# Office 365 solutions

Simple and secure implementation of Microsoft Office 365

Many organizations are moving their email and collaborative applications to the cloud to remove the IT burden of managing them in-house. Some are implementing a hybrid environment – only migrating a portion to the cloud, while maintaining certain mailboxes and applications on-premises for security and compliance reasons. In either scenario, migrations to Microsoft Office 365 can be long, complex and expensive projects that must be carefully planned and executed. Getting the migration wrong can result in significant downtime for end users, increased IT labor costs and even data loss.

Stay in control of your Office 365 or hybrid environment with migration, management and security solutions from Dell Software.

We help you:

- Properly prepare for the transition to the cloud

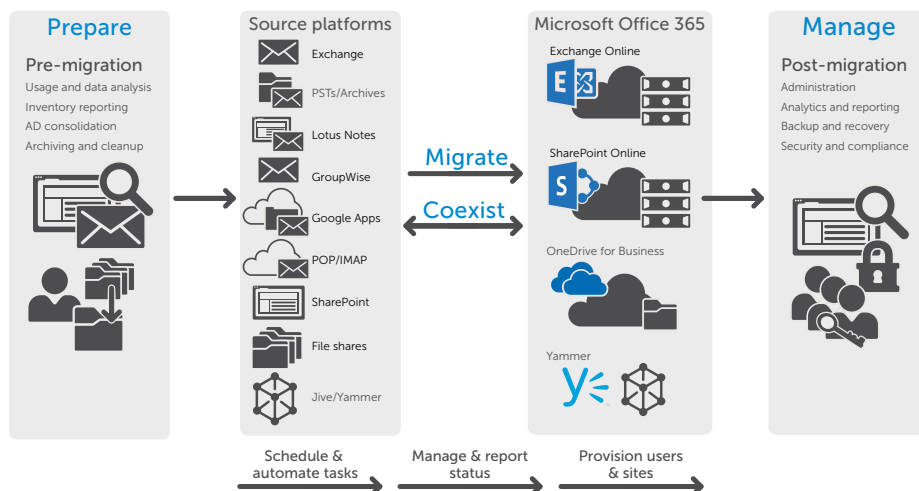

- Migrate without impacting end users
- Maintain business productivity with coexistence
- Centrally manage your environment to ease IT burden
- Ensure secure access for your end users

Combine our award-winning solutions for Exchange, Lync, SharePoint, OneDrive for Business and Yammer with world-class experience, a vast partner ecosystem and global 24/7 support to round out our complete, end-to-end Office 365 solution. With Dell you get pre-migration readiness, migration and coexistence covering almost any source and target scenario you can imagine and post-migration management solutions for reporting and analytics, disaster recovery, compliance and auditing and security. We'll help you fully leverage your Office 365 subscription plan and maximize your ROI.

Benefits:

- Assess the current environment to properly plan for migrations
- Archive on-premises data to streamline migrations and reduce licensing fees
- Simplify migration with automation, enabling IT to complete projects on-schedule
- Mitigate risk to provide little or no impact on end-user productivity
- Ensure coexistence between legacy platform and Office 365 to maintain productivity
- Recover any lost data that might happen during a migration
- Simplify Office 365 management with centralized dashboard
- Remove the burden of user access to Office 365 being managed in a silo or on an ad-hoc basis
- Extend existing security policies, technologies, and practices to O365
- Simplify user lifecycle management across Active Directory, Office 365, Exchange Online, SharePoint Online and OneDrive for Business

## ZeroIMPACT Office 365 solutions

Ensure a successful transition to Office 365 and make sure you get the most from your investment with help from Dell Software.

## Solutions for Office 365

Active Roles Server

Administrator for Office 365

Archive Manager

Change Auditor for Exchange

Migration Suite for SharePoint

Recovery Manager for Exchange

UC Analytics

### Secure

Cloud Access Manager

Identity Manager

## Solutions for every phase of implementation

**Prepare** — Perform pre-migration assessments of your entire legacy environment, including Active Directory, Exchange, SharePoint, OneDrive for Business, PSTs, Lotus Notes and enterprise social networks.

- Inventory users, mailboxes and applications, determine migration requirements, estimate project costs and plan your target platform
- Identify users, mailboxes and applications that don't need to be moved, making migrations faster and less expensive by reducing your Office 365 licensing costs
- Archive on-premises data before you migrate to streamline migrations and reduce licensing fees
- Consolidate or restructure your Active Directory environment before the migration to properly prepare for Office 365
- Protect or back-up data so it can be restored in minutes during a migration

**Migrate** — Mitigate the risk of data loss and minimize IT and end-user impact with a high-fidelity migration to Exchange Online, SharePoint Online, OneDrive for Business and Yammer.

- Migrate email, archives, PST files, applications, content, files and public folders to the cloud with fewer migration jobs to reduce project costs and timelines
- Schedule and automate migration tasks to simplify the transition and reduce IT work time
- Monitor migration progress with detailed status reports to satisfy management requirements

**Coexist** — Ensure interoperability between end users on on-premises Exchange, Notes, or GroupWise and Office 365 or hybrid environment.

- Synchronize directories to maintain end user productivity during the transition period
- Provide free/busy lookups and ensure proper calendar scheduling between platforms

**Manage** — Stay in control of your messaging and collaboration environment, whether you have Office 365 or a hybrid environment.

- Save valuable administrative time by automating user and license management and provisioning across your Office 365 or hybrid environment
- Enhance your understanding and insights into Exchange Online usage and trends to help enforce communication policies and ensure SLAs for responsive departments.
- Audit administrator access and end user mailbox activity for mailboxes hosted on Office 365.
- Solve your email archiving needs with powerful search capabilities
- Simplify the recovery of data in Office 365 and respond to e-discovery requests quickly by finding exactly what you need
- Analyze and monitor trends in SharePoint Online and OneDrive for Business site and user activity, data growth and historical usage to get the most business insights from your data.
- Easily create, manage and restore SharePoint Online and OneDrive for Business backups, either granularly restoring only what's needed or in bulk to restore complete sites, site

**Secure** — Ensure that users accessing Office 365 do so in a secure and efficient manner without building dedicated security around Office 365.

- Include Office 365 in a unified authentication and authorization strategy that delivers single sign-on to Office 365 along with all other browser-based applications — on-premises, remote, own-hosted, or SaaS
- Gain visibility with detailed reports and automate permissions management with the touch of a button.
- Unify governance of all cloud applications under the same umbrella as all other applications and access types with complete visibility and control placed in the hands of the business
