

Recovery Manager for SharePoint

Powerful, easy-to-use SharePoint backup & recovery

For an administrator, SharePoint recovery can be a complex and time consuming process. Because of the limitations of native tools, you will typically need to look to third-party tools for more functionality. Third-party tools also offer improvements when it comes to the cost, complexity and repeatability of recovering a single item or your full farm. Luckily, Dell's solutions for SharePoint management offer:

- Complete searches and previews of your backups and recycle bins so you know what you're recovering
- Flexibility to restore data wherever it is needed
- Full-farm backup and recovery
- Recovery of externalized SharePoint data via RBS

With Recovery Manager for SharePoint, you can simplify and accelerate granular and disaster-level SharePoint restores. Dell's flexible tool lets you leverage your existing enterprise or native backups in order to perform granular searches, previews and comparisons. From your existing backups, you can then execute restores—even when your data is offline or stored in external or remote BLOB storage (EBS/RBS).

Leverage your existing backups

Use your existing backups to recover the data you need instead of creating completely new, duplicates. Recovery Manager integrates with SQL Server and SharePoint native backups, as well as

"Before Recovery Manager for SharePoint, a user needing a restore had to wait an average of 8-16 hours before select support staff was available. Now, the average wait is 1-4 hours, because Recovery Manager for SharePoint's easy-to-use interface allowed us to train service desk staff to take on support tasks."

*Adrian Salas
Sr. Systems Engineer
RAND Corporation*

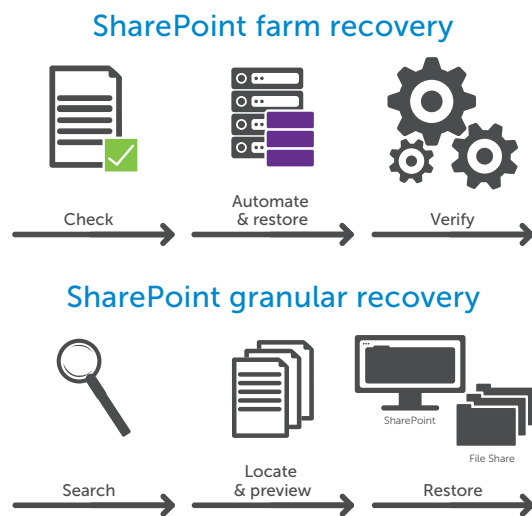

Benefits:

- Simplifies SharePoint recovery with enhanced search and preview capabilities
- Speeds recovery projects by recovering data directly where it is needed
- Offers a single solution for all SharePoint restores including granular, farm-level and externalized data recovery, even if you don't have an enterprise backup solution
- Streamlines the recovery process by not requiring of database engineers or access to SQL Server in order to complete restores
- Reduce the costs of SharePoint backup and recovery by using your existing backups

Create and schedule backups

Use existing third-party backups

Recovery Manager for SharePoint indexes the content in your backups in order to simplify searches and data restores in the future.

System requirements

SharePoint Server:

SharePoint 2003, 2007, 2010 and/or 2013

Platform:

Intel x86, x64 (500MHz or higher)

Either of the following: Microsoft SQL Server 2000 SP4, 2005 SP1 or later, 2005 Express SP1 or later, 2008 R2 or 2012

Operating System:

Either of the following: Microsoft Windows 2003 SP1 or later, XP SP2 or later or 2008 (R2)

Supported Backups:

Native SharePoint/SQL backups

Dell AppAssure Snapshots

Dell LiteSpeed for SQL Server, including enhanced support for LiteSpeed backups stored on Tivoli Storage Manager Server as a striped backup

Dell NetVault Backup

Dell vRanger Backup and Replication

IBM Tivoli Storage Manager for Databases

Symantec Veritas NetBackup

Symantec Backup Exec

HP DataProtector

Microsoft System Center Data Protection Manager, including support for DPM 2012 Snapshots

For complete system requirements, visit quest.com/recovery-manager-for-sharepoint.

Dell LiteSpeed for SQL and other third-party backups, to enhance index and search capabilities and simplify restore process.

Improved discovery and indexing

Save time searching for and through existing backups and recycle bins to get the exact data you need. Recovery Manager automatically discovers and indexes your existing backups, including externalized SharePoint data, as they are created so you can locate and preview missing items across multiple backups and recycle bins before restoring them.

Complete restores

Spend less time and effort in the recovery process with full-fidelity data restores, including permissions, version history, workflow status and metadata. Recovery Manager automatically restores data back to its previous environment including workflow status and permissions.

Access anytime

Get users the SharePoint data they need when they need it—even when SharePoint is down. Recovery Manager recovers data to non-SharePoint locations, like a desktop or a fileshare, so users are never without the content they need.

Secure backup and recovery

Keep your SharePoint configurations and data secure no matter what. Recovery Manager performs site, site collection, web application and farm restores, including all content, services and configuration settings.

About Dell Software

Dell Software helps customers unlock greater potential through the power of technology—delivering scalable, affordable and simple-to-use solutions that simplify IT and mitigate risk. This software, when combined with Dell hardware and services, drives unmatched efficiency and productivity to accelerate business results. www.dellsoftware.com.
