

SharePlex™ for SAP HANA®

Ensure high availability and ZeroIMPACT SAP HANA migrations

Hundreds of thousands of organizations will migrate their SAP application databases to SAP HANA in the coming years. Ensure the success of your migration with Quest SharePlex, the golden alternative for database replication.

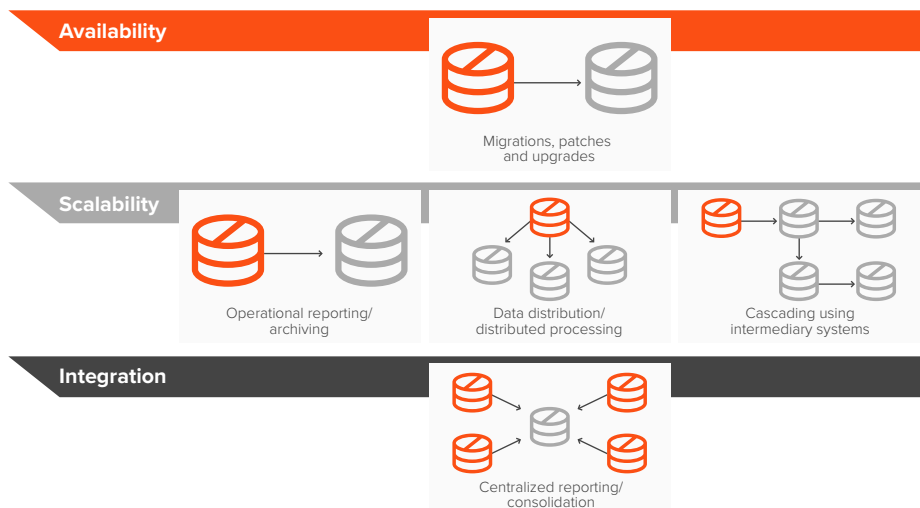

SharePlex provides a near-real-time copy of production data during migration from Oracle® databases to SAP HANA without affecting performance or availability. The data is continuously replicated to keep source and target databases synchronized. ZeroIMPACT database replication in SharePlex reduces downtime during migration and mitigates business risk, allowing you to

focus on maintaining your environment. SharePlex supports replication of data types such as LONG columns and Large Objects (LOBs) commonly found in SAP applications. It uses a streaming process outside the database to improve performance, minimize the impact on network bandwidth and ensure scalability and availability.

SharePlex replicates all SAP data types, including SAP HANA. Whether you're upgrading a legacy platform, migrating to a new platform or moving to the cloud, SharePlex enables you to advance and modernize your SAP infrastructure affordably, with unparalleled technical support.

BENEFITS:

- Replicates and integrates data in near-real time from Oracle databases to SAP HANA
- Allows you to migrate on your schedule with unlimited practice runs
- Minimizes downtime as you migrate your SAP databases
- Offers configurability for highly customized implementations
- Helps ensure high availability and disaster recovery of mission-critical Oracle databases during migration
- Complements the SAP migration process
- Includes award-winning, industry-leading technical support

SharePlex offers availability, scalability and integration with SAP HANA.

FEATURES

- **Platform-agnostic solution** — Replicate UNIX®, Linux® or Windows® systems in migrations from Oracle to Oracle and Oracle to SAP HANA.
- **ZeroIMPACT SAP migrations** — Maintain business continuity throughout the migration as users interact with SAP applications normally. Clone the current production database to a new production system, and use SharePlex to reconcile and synchronize any database changes made during the migration process to the new production system.
- **Reporting and analysis without affecting production** — Offload your users' reporting tasks and downstream decision support from production databases to a SharePlex replica. Analyze current data in near-real time with no impact on online transaction processing (OLTP).
- **High accuracy and data accessibility** — Use the log-based replication of SharePlex to maintain a replica — complete or a subset — of your Oracle data in a live reporting instance. Improve application performance and availability while meeting the needs of compliance and information governance.

- **More-useful secondary systems** — Run queries against the always up-to-date replicated databases as an optimized Business Warehouse (BW) or Business Warehouse Analytics (BWA) platform. Eliminate time-consuming and resource-intensive data extracts that would normally occur during off-peak hours or system downtime.
- **Flexible support for SAP HANA evolution** — Explore, augment and analyze all data in near-real time without affecting or changing the live source application.

ABOUT QUEST

Quest helps our customers reduce tedious administration tasks so they can focus on the innovation necessary for their businesses to grow. Quest® solutions are scalable, affordable and simple-to-use, and they deliver unmatched efficiency and productivity. Combined with Quest's invitation to the global community to be a part of its innovation, as well as our firm commitment to ensuring customer satisfaction, Quest will continue to accelerate the delivery of the most comprehensive solutions for Azure cloud management, SaaS, security, workforce mobility and data-driven insight.
