

Sophos Clean

Advanced Malware Removal Tool

Sophos Clean signature-less technology uses progressive behavior analytics, forensics, and collective intelligence to discover and remove zero-day threats, Trojans, rootkits, ransomware, and other polymorphic malware.

Deep System Clean

Instead of simply searching for malware, Sophos Clean looks across your entire system identifying not only the malware, but also the actions it has taken. The clean up capability removes the immediate threat and unpicks all the system changes, such as files written and registry changes, restoring your system to its pre-infection state.

Get a second opinion

How do you know if your endpoint protection is actually working? Your security could have missed a virus and be clueless to the attack you're under. With Sophos Clean you can do an additional scan, find security breaches, and get rid of them.
