# Toad Business Intelligence Suite

An Out-of-the-Box Enterprise-Class BI Environment for
Self-Service Data Integration and Business Intelligence

Charged by the business with a mandate to provide "one version of the truth," IT has adopted business intelligence (BI) platforms that sacrifice agility and flexibility in support of strong data governance. These platforms are expensive and labor intensive to maintain. They have a low adoption rate with business users since they don't provide the access and speed the business requires. As a result, IT becomes the instrument of the business to write reports and create and manage dashboards. Even with this added output from IT, business users continue to require greater access to data to get what they need when they need it.

Toad® Business Intelligence Suite builds a communication and technology bridge between IT and the business by providing products that maintain data security and governance while enabling true self-service for business users. This powerful, compact, self-service toolset is tailored for both technical and non-technical end users. Users can quickly access all required data sources, easily join the data together, and analyze it visually—without compromising IT standards. Both business and IT users can navigate difficult data access, integration, and analysis tasks. User interfaces allow each type of user to work with intuitive environments to get secure access to corporate BI platforms,

Benefits:
- Provides business insight quickly and efficiently – without compromising standards
- Connects to any data source
- Lets you cleanse and prepare data on your desktop
- Increases productivity of business users and IT
- Complements existing BI investments

Big data – Cloud and NoSQL sources, Salesforce, Hadoop

Corporate BI layers – OBIEE, BO, MS Cubes

Excel Spreadsheets

Traditional RDBMS –

Toad Intelligence Central

Toad Decision Point – Graphical user interface for business users

Toad Data Point – SQL interface for technical users

Connect to any data source

along with traditional databases like Oracle, IBM, MS Access, and Excel, as well as non-traditional sources including, cloud data and big data, such as Hadoop.

Features

Connects to Any Source—Provides single-source access to all traditional, proprietary, and emerging data sources.

Self-Service Data Integration—Lets you quickly and easily cleanse and prepare data on your desktop.

Rapid Visual Analysis—Enables you to visually and intuitively explore, analyze, and understand information faster.

Flexibility—Empowers business and IT users with a flexible and complete personal BI solution that doesn't sacrifice standards.

Improves BI Adoption—Offers an elastic solution that's effective for individual users and large teams alike. Plus, it's designed for both small and large data sets.

Reduces Costs and Complexity—Delivers compact and complete self-service BI tooling that's easy to set up, use, and maintain. Allows business users and IT to leverage their existing BI infrastructure alongside the Toad Business Intelligence Suite.

Improves User Productivity—Provides the right tool for the right user, improving productivity for technical and non-technical users.

Speeds Time to Analytics—Enables business users to perform self-service analysis with IT's support. IT departments can build complex data environments and provision these data sources to business users with the confidence of knowing data governance standards are being upheld.

Toad Business Intelligence Suite Components

Toad® Decision Point
Self-Service BI Tool for Business Users – Simplify Data Access, Analysis, and More

Toad® Data Point
Data Query and Integration Tool for Data Analysts – Connect, Join, Transform, and Provision Data with Ease

Toad® Intelligence Central
Agile Data Collaboration that Works with Your Existing IT and BI Architecture
