

# Unitrends Cloud Services

## Flexible Cloud Storage, Backup Copy, and Retention

The Unitrends Cloud offers data protection, backup copy, and disaster recovery, and business continuity solutions that empower our Recovery Series purpose-built backup appliances and Unitrends Enterprise Backup software products with secure, automated, and cost-effective cloud capabilities. Simply connect your Unitrends physical or virtual appliance to the Unitrends Cloud and automatically get off-site storage of your backups.

Unitrends offers multiple cloud storage options to fit any need. Options include No Limits Cloud™ and Forever Cloud™. Whether you are looking for off-site storage for Disaster Recovery or require long term retention for regulatory and compliance reasons, Unitrends Cloud is flexible and affordable.

## Choose Your Unitrends Cloud Option

### Forever Cloud

Forever Cloud for long term retention allows users to copy on-premise backups to the highly available Unitrends Cloud, an infrastructure designed to keep backups for an infinite number of years. This removes the burden of long-term retention management from you and extends on-premise retention to the cloud, reducing capital expense and operating costs while providing a cost effective alternative to sending tapes off site for long term retention. Forever Cloud is also extremely affordable and delivers cost predictability by handling the complex dynamic of managing cloud storage as data increases over time. In 500 GB increments, Forever Cloud users pay only for the amount of data they need to protect and retain from their production environment.

### No Limits Cloud

Our No Limits Cloud offers cloud storage that dynamically scales to the capacity of your on-premise Recovery Series or Unitrends Enterprise Backup appliance. All of the data stored on your appliance is replicated in the No Limits Cloud.

### Disaster Recovery Services (DRaaS) Add-On

Streamline your DR practices and simplify your infrastructure with backup and recovery in the cloud. No Limits Cloud and Forever Cloud can be enhanced with optional Disaster Recovery as a Service (DRaaS) and ReliableDR. DRaaS allows for the rapid spin-up of critical applications within the cloud at a cost significant lower than building a second DR environment. ReliableDR ensures that critical recovery SLAs are being met at all times via automated, application level testing and recovery in our DR environment.

## Secure Unitrends Cloud Services Include:

- Redundant cloud storage ensures availability of your data.
- Retention options so you can satisfy internal policies, compliance requirements, and industry regulations.
- Advanced WAN Optimization (WO) and in-flight deduplication means that your data transfers to the cloud faster, with less drag on your network.
- Military grade security with AES-256 encryption capabilities for data in-flight and at-rest.
- Rapid deployment in a matter of minutes with the same replication and backup copy UI as Recovery Series and Unitrends Enterprise Backup on-premise appliances.
- Quickly establish cloud protection with rapid seeding to quickly establish the initial data set in the cloud (optional, available to customers in U.S.).
- In the event of a disaster at your site, backups of your data are copied to a Recovery Series appliance or NAS device and shipped to your primary site within 24 hours after the disaster event is declared.
- Hosting in secure SSAE 16 certified data centers for your peace of mind. Unitrends Cloud data centers are available in the United States, Canada, Germany, United Kingdom, and Australia.
