

Sophos Cloud Firewall Manager

Centrally manage your customer firewalls from the cloud

Sophos Cloud Firewall Manager (CFM) offers a powerful centralized management solution to manage all your customer's XG Firewalls. You get full-featured centralized management with all the benefits of a cloud-based solution, including instant deployment and anytime, anywhere access. Sophos Cloud Firewall Manager saves you time and effort, enabling you to focus on expanding your value-added security services to create new revenue streams and grow your business.

Highlights

- ▶ Get up and running instantly with anytime, anywhere access in the cloud
- ▶ Enroll and configure new customer firewalls quickly and efficiently
- ▶ Full-featured configuration and monitoring
- ▶ Configure and tune security, web, application, IPS, anti-spam policies and much more
- ▶ Re-usable configuration templates enable convenient and consistent protection

Expand your security services

Sophos Cloud Firewall Manager offers a powerful, full-featured centralized management solution for all your customer's XG Firewalls. It enables you to expand your security services portfolio to include configuration tuning and monitoring of system health, uptime, security incidents, and more. And it couldn't be easier to get up and running thanks to the convenience of the cloud, with instant deployment and anytime, anywhere access.

Reduce deployment time and support costs

Sophos Cloud Firewall Manager save you time, effort, and ultimately money, managing the day-to-day network security operations of your customers. Common tasks are simple, whether you're deploying a new customer firewall, upgrading firmware, maintaining backups, resolving security incidents or troubleshooting issues, it's fast, effective, and convenient with Sophos Cloud Firewall Manager.

Enable proactive support

Sophos Cloud Firewall Manager provides at-a-glance insight into your customer's network and device health including security, resources, availability, and licensing status. Take advantage of a variety of helpful monitoring views that provide the level of detail and oversight you need. Adjust threshold values for monitoring parameters and configure important email notifications for a range of events like connectivity status change (device, gateway, VPN, HA, RED), subscription status (expiry), resource utilization (CPU, Memory and Disk usage), and threshold-based security alerts (intrusion attacks, ATP Events, Virus, Security Heartbeat).

Powerful tools make your job easy

- Centrally manage configuration of security policies, Application filtering, Web filtering, IPS, VPN, Email, and more for your customer firewalls
- Create re-usable configuration templates to setup a new customer firewall in minimum time
- Get flexibility to group devices by model, firmware, company name, country, state, city, device name
- View details of configuration changes and roll back configuration changes by using Change Control and Logging

Sophos Cloud simplicity and scalability

As part of Sophos Cloud, you'll be up and running in minutes. And you get the advantage of cloud scalability that enables you to grow and add new customers and devices without investing in more management infrastructure.

Sophos Cloud Firewall Manager is integrated with Sophos business systems and is accessible from the Cloud Partner Dashboard. Sophos Partners can request authorization to manage customer firewalls from the Sophos Cloud Partner Dashboard and customers can approve or reject the request from their MySophos account.

Accessible anytime, anywhere

You can access your Sophos Cloud Firewall Manager at any time from any where enabling you to deliver reliable support for your customer's network security 24x7 even when you are away from the office.

The screenshot displays the Sophos Cloud Firewall Manager interface. The top section shows a 'Device Configuration' view for a device named 'Dot34'. It includes a 'Security' table with metrics like Total IPS attacks (0), Critical IPS Attacks (0), and ATP Events (0). A 'License' table shows various protection services such as Base Firewall (Expired), Network Protection (Subscribed), and Web Protection (Subscribed). Below these are 'Resource' and 'Availability' sections. The 'Resource' section shows CPU usage (0%), Memory (64%), and Disk usage (1%). The 'Availability' section shows a 'Stable Connection' to the central console. On the right, there's a 'CPU usage for last two hours' graph. The bottom section shows a 'System Management' view with a 'Device Monitor' grid. This grid is divided into four columns: Security, Resource, License, and Availability. Each column contains a grid of colored squares representing the status of various devices (e.g., UK_Device1, US_Firewall1, UK_Device2, etc.) across different categories.
