ESET[®] NOD32[®] Antivirus for Microsoft[®] Exchange[®]

ESET NOD32 Antivirus for Microsoft Exchange

Since most viruses and malicious software come from email, protection should be applied at the distribution point – the mail server.

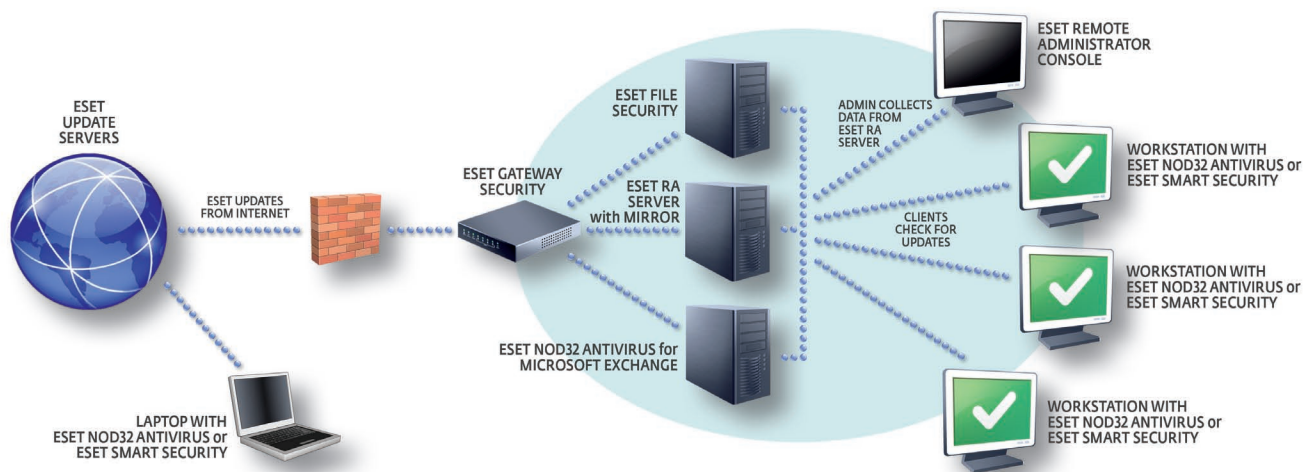

ESET NOD32 Antivirus for Microsoft Exchange brings lightweight and powerful protection for business-critical email servers. It offers multithreaded background scanning for higher performance, and rule-based customized scanning for greater efficiency.

Every email is scanned before it reaches the end users. Stored mail can be automatically rescanned with each signature update.

ESET NOD32 Antivirus for Microsoft Exchange automatically detects threats and stops outbreaks, preventing disruptions to your business.

Key Benefits

- Complete email protection means business runs smoothly. Scan all email entering the network for threats that can cause business disruptions and financial damages.
- Flexible configuration minimizes impact on resources – scan email on access or in storage on the Exchange server. Control how and when to scan specified range of email messages, as well as how long to run each scan.

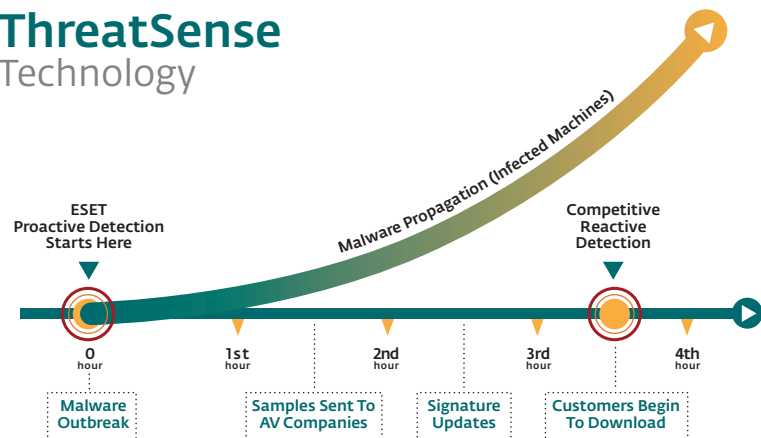

New Features

Full Microsoft Exchange 2007 support	Supports the following systems: 32-bit version for MS Exchange 5.5 SP3, 2000 SP1 & 2003 64-bit version for MS Exchange 2007
Improved architecture	Virus scanner runs inside the NOD32 Control Center as a separate process, independently of the MS Exchange Server process (Optional on 32-bit version).
More granular scanning scoping	Background scan can be configured to run only on messages received in certain time period – last week, month, three months, six months, one year or all messages. Additionally the product may be configured to scan only plain text, RTF, or messages with attachments.
Background scan scheduling	Background scans can be scheduled to run only in a specified time frame, for example during non-business hours when server load is lower.
Mailbox specific rules	Rules can now be executed based on mailbox name.
Performance monitoring	Log file now includes performance information, which can be used by administrator to optimize configuration settings.

System Requirements

Operating Systems:	Microsoft® Windows® NT 4.0 Server Microsoft Windows 2000 Server Microsoft Windows Server 2003 Microsoft Windows Server 2008
Mail Server:	Microsoft Exchange Server 5.5 SP3 and higher Microsoft Exchange Server 2000 SP1 and higher Microsoft Exchange Server 2003 Microsoft Exchange Server 2007
Hardware:	30MB free hard disk space. 32MB RAM in addition to minimum operating system and MS Exchange Server requirements.
