

LENOVO FLEX SYSTEM x240 COMPUTE NODE

GET THE MOST

The Lenovo® Flex System™ x240 Compute Node delivers powerful performance with Intel® Xeon® processors—up to a 50 percent performance boost over previous generation servers.¹ This enables businesses to get more out of their compute environment. Features such as automated power management with onboard sensors give you more control over power and thermal levels across the system. These capabilities, combined with memory capacity up to 768 GB, help you get the most out of your compute environment.

GREAT FLEXIBILITY

With integrated virtual fabric take advantage of up to 32 ports of virtual networking capabilities. With 10 Gigabit Ethernet (GbE) onboard, you get multiple protocols, including Ethernet, Fibre Channel over Ethernet and iSCSI. Virtual networking can reduce up to 75 percent adapters, cables and upstream switch ports to help control costs.² And, you also get significantly simpler management with reduced cabling and fewer components to manage.

SYSTEMS MANAGEMENT

The Flex System x240 Compute Node is now supported by Lenovo XClarity™, a new centralized systems management solution that helps administrators deliver infrastructure faster with less effort. This solution integrates easily into Lenovo System x® M5 and X6 rack servers and Flex System, providing automated discovery, monitoring, firmware updates, configuration management, and bare metal deployment of operating systems and hypervisors across multiple systems.
