

McAfee Secure Internet Gateway

Comprehensive protection against web and email threats

Protect your business from spam, phishing, spyware, viruses, malicious web sites, and inappropriate surfing with our integrated appliance. Step up to enterprise-class protection in an affordable and easily managed alternative to piecemeal products.

KEY ADVANTAGES

Comprehensive threat protection

- A single appliance defends against both web and email threats

The best value in its class

- Enterprise-class coverage at an affordable, flat-rate price, with inexpensive renewals

Save precious time

- Cut deployment and management effort with a pre-configured appliance that is automatically updated

Stay safe from current and future threats

- Award-winning technology backed by McAfee Avert Labs research

"Best Anti-Malware"
—SC Magazine, 2007

Fend off escalating threats

Your most important business tools—email and the web—are also the conduit for nine out of 10 attacks. Spam, phishing, and spyware are increasing and becoming more sophisticated and harder to defend against. The impact to your network is enormous. Your servers are clogged with spam. Your data is at risk. Precious IT staff hours are consumed.

Outdated solutions and piecemeal products offer poor protection at a high cost. They leave your network and business systems exposed. And—because they're difficult to manage—they leave you with no time or budget for other priorities.

McAfee® Secure Internet Gateway provides advanced protection against spam, phishing, viruses, spyware, and web dangers—all in a single solution. We integrated all the web and email protections you need in this affordable, easy-to-use device.

McAfee Avert® Labs help you stay ahead of the future threats with 24/7 global research—just one of the reasons why 120 million users count on McAfee.

Safeguard web and email use

Secure Internet Gateway finds and blocks 98 percent¹ of spam, including hard-to-detect image spam, thanks to its powerful combination of detection algorithms. Virus and spyware blockers scan every download and attachment to keep end users safe.

Built-in McAfee SiteAdvisor™ gives you true web safety. It monitors, warns, or proactively stops users from visiting web sites that harbor spyware, phishing scams, or spamming agents. You can also block or report use of inappropriate web sites—to improve productivity, free up bandwidth, and reduce liability.

Save money, time, and hassle

Secure Internet Gateway is a complete, self-contained solution—from its hardened operating system to its built-in spam quarantine. There's no software to install or maintain. McAfee applies automatic updates minute by minute to block the newest threats. Plus, with McAfee ePolicy Orchestrator®, you can centrally and efficiently manage all your gateway, desktop, and mail server protections.

Save time and improve control over your security. All for one affordable, flat-rate price.

SYSTEM CONFIGURATIONS

Model 3000

- Single processor
- Single hard drive
- Single power supply
- 10/100/1000 networking
- 512 MB RAM
- 200 users*

Model 3100

- Single processor
- Single hard drive
- Single power supply
- 10/100/1000 networking
- 512 MB RAM
- 400 users*

Model 3200

- Single processor
- Dual hard drive (RAID 1)
- Single power supply
- 10/100/1000 networking
- 1 GB RAM
- 800 users*

Model 3300

- Dual processor
- Dual hard drive (RAID 1)
- Dual power supplies
- 10/100/1000 networking
- Fiber networking
- Out-of-band management
- 4 GB RAM
- 1,200 users*

* User guidelines are based on a conservative assumption of 50 messages received per hour per user with all email and web security features activated.

Keep spam out with proven anti-spam technology

- Detect and block 98 percent of spam, including image spam, with few false positives (validated in independent certification by West Coast Labs)
- Streaming updates quickly shut down new forms of spam
- Increase control with built-in quarantine and advanced spam management

Detect and intercept viruses and spyware

- Block viruses and spyware at the gateway—before they infect your network and desktops
- Reduce cleanup costs by preventing threats from entering your network
- Scan all downloads: email (SMTP and POP3) and web (HTTP, including webmail)

Surf safely with McAfee SiteAdvisor

- Give users true web safety against malicious web sites that harbor spyware, phishing scams, or spamming agents; forewarn them about potential spam and dangerous exploits
- In-depth content inspection and site testing go beyond traditional URL filtering to allow, warn, or block access based on content and spamming potential
- Educate users with intuitive safety ratings and threat profiles for web sites

Put an end to inappropriate and frivolous web surfing

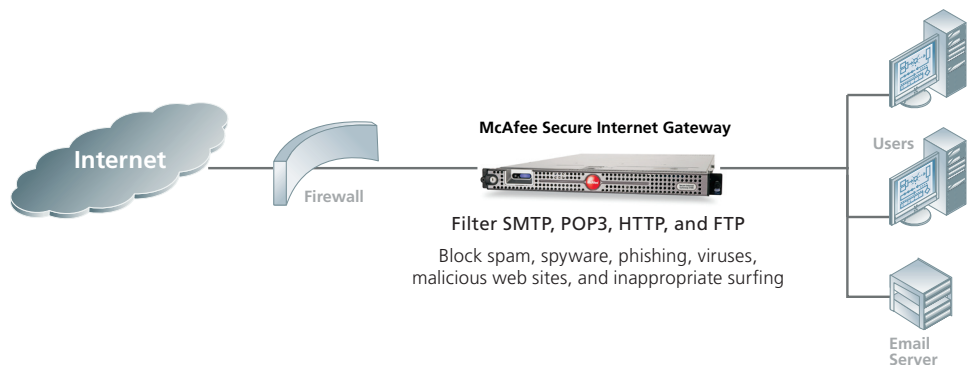

- Preserve network bandwidth and improve security by blocking inappropriate or frivolous web use like gambling, shopping, and music downloads
- Enforce appropriate use policies and report on individual web surfing behavior with our optional web filtering module

Improve email privacy compliance

- Use predefined dictionaries and heuristics to automatically scan email for financial and private information as defined by the Health Insurance Portability and Accountability Act (HIPAA), the Gramm-Leach-Bliley Act (GLBA), the Sarbanes-Oxley Act (SOX), and PCI regulations
- Block, monitor, or encrypt detected messages to ensure compliance
- Scan more than 300 different types of attachments

Gain better control over your security with McAfee ePolicy Orchestrator

- Manage policies and configurations with a single console for desktop, gateway, and mail servers to improve visibility and reaction times when under attack
- Get customizable, graphical reporting for multiple audiences—high level or detailed
