A strong foundation requires the fundamentals — from VMware data protection to Microsoft SQL database backup.

Innovating for tomorrow's challenges

Total coverage & scale

Protect comprehensively with physical and virtual servers on-premises (for Linux and Windows), VMware and in-cloud virtual machines, and integrated application support for MS SQL 2008-2017. Scales as you need to add new users, protect more data, and build or adapt infrastructure.

Ultimate flexibility

Built for flexibility and control. Use Metallic cloud storage or bring your own (cloud or on prem), with our unique SaaS Plus approach. Take advantage of pre-configured and recommended plans that bake in best practices — so you can leverage others' lessons for your own benefit - or create your own.

Fast & enduring

Time is of the essence with rapid recovery from deletion, corruption, or attack, along with speed-enabled local copies and outage-covering cloud copies. Keep multiple recovery points and retain data for as long as you need.
