Quest

SharePlex for SQL Server

SQL Server replication for better business intelligence and reporting

Increase scalability, maximize availability and provide near real-time data integration with SharePlex for SQL Server. This simple-to-use solution ensures business continuity while meeting your database operational goals; it provides a near real-time copy of production data by offloading reporting and analysis — without impacting OLTP performance and availability. This highly reliable, high-performance and low-impact technology offers a low-cost alternative to other replication tools.

With SharePlex for SQL Server, you can easily replicate multiple copies of data locally, remotely or in-the-cloud to:

- **Dramatically reduce downtime during migrations from Oracle to SQL Server** — Return control

of the maintenance schedule to IT professionals by no longer depending on technology runtimes.

- **Achieve cost-effective scalability** — Isolate and remove the operational reporting and data warehousing loads from Oracle to SQL Server with a near real-time copy of your data.

- **Reduce storage costs** — Archive historical data affordably. A lean Oracle transaction instance with SQL Server acts as an archive repository.

- **Maximize the value of your data** — Support business intelligence and analytics projects with near real-time data integration.

> "With SharePlex, we were able to successfully integrate our Oracle and SQL Server databases without the need for additional programming resources, all while keeping our data secure."

BENEFITS:

- Dramatically reduce downtime during migrations.

- Improve OLTP performance.

- Enable real-time reporting and data warehousing.

- Optimize business intelligence, reporting and analytics applications for real-time use.

Offload reporting/archiving/ data warehousing	Centralized reporting/ (consolidation)	Data distribution/ distributed processing
Data integration	Migrations	

SharePlex use case scenarios when replicating data from Oracle to Microsoft SQL Server.

FEATURES

Business intelligence support — Integrates directly into SQL Server environments to support your business intelligence initiatives.

Impact-free migrations — Enables modernization of IT environments with nearly zero downtime during migrations.

User-defined data delivery — Facilitates delivery of Oracle data to SQL Server databases for complete platform migrations, archiving, analytics, data distribution, distributed processing and centralized reporting.

SharePlex Manager — Provides a GUI dashboard to easily monitor your SharePlex environment.

Superior total cost of ownership — Requires the lowest capital (CapEx) and operational expenditures (OpEx) of all industry-leading solutions. Reduce CapEx with a complete, low-cost solution that includes all the necessary tools for migrations, reporting, data warehousing and application integration without requiring any add-ons. Reduce OpEx with a highly coupled solution that provides unrivaled operational and administrative efficiency.

World-class support — Provides rapid answers to all your questions and invaluable guidance from industry experts, consistently earning excellent approval ratings from more than 94 percent of customers. Mission-critical, multi-tier support is available 24x7 through multiple, localized, non-outsourced support centers.

Services — Offers implementation, configuration and migration services from a highly qualified and experienced team with a significant track record of customer satisfaction and success.

Superior development — Delivers new features to the marketplace when they're needed, even outside of release cycles.
