Security made simple.

Sophos Secure Workspace

Extend your encryption to your mobile devices

Most organizations today have some level of encryption protection in the workplace. But what about all those files and documents sent via email, shared within groups, sync'd to the PC at home, and to your mobile phone? The corporate perimeter no longer ends at the office door. While you cannot control where the data goes, you can still ensure it remains protected. Sophos offers comprehensive file encryption, protecting every single file, be it on your desktop or your mobile device.

Highlights

‣ Connect with and access files from leading storage providers and any WebDAV service

‣ Get files from a defined company document store

‣ Decrypt and encrypt files with AES 256 bit, a technology even the military uses

‣ Manage the keys required to lock and unlock the files

‣ Allows to add your own keys and encrypt new files on your mobile device

‣ View HTML, images and videos

‣ View and edit text and PDF documents

‣ Protect app access with another passcode for additional security

No limits to collaboration

With Sophos SafeGuard documents can move freely from Windows to Mac to Android and IOS. And, you can be assured your data is protected and encrypted all the way, mitigating the risk of data loss. Users can view and edit data immediately, then save and share as the data is automatically encrypted again. The workflow is seamless, the process invisible. This is security made simple.

Protecting data in the cloud

All data stored in the cloud should be safe; however, it is dependant upon offering differing security and access policies and the users discipline. The only truly safe method is to encrypt data immediately, before it even reaches the cloud. Encrypted documents can then only be opened with the right keys; and each key is protected with a passphrase. Such encrypted documents cannot be opened by anybody else.

Comprehensive security

Sophos is the only security provider to provide a data security solution that completely covers all data protection situations. Secure your device with advanced antivirus engines, security and privacy advisors, and a management console that allows you to define and execute your security policies. You also gain the ability to detect a compromised device and automatically lock it.

Managed with Sophos Mobile Control (SMC), our EMM (Enterprise Mobility Management)

- Enabling and enforcing an App password

- Auto-locking the app after a certain time off-line

- Remotely locking the app in case of a security breach

- Push corporate documents directly to all mobile devices

- Define comprehensive security policy and compliance rules including network, endpoints, and mobile devices

New in Version 5

- Android and IOS devices are now fully managed by SMC

- Slick new user interface designed for efficient use

- Edit PDF documents

- Update notification

- Receive files directly from the Corporate Document Store

Benefits for Users

- CEO, CFO

  - Assurance that your organizations data is protected

  - Fully embrace new collaborative technologies

  - Budget-friendly and sustainable user licensing

- IT Manager

  - Rock solid reliability and trusted technology

  - Very easy to deploy and manage

  - Low total cost of ownership

  - Excellent support

- Security Officer

  - Allows for a comprehensive security policy that go beyond the network¬—reaches into the cloud and to all mobile devices

- End user

  - Intuitive, easy-to-use encryption and barely-noticeable decryption

Supported platforms

- Android 4.0.3+

- IOS 5+

Products

- Secure Workspace is part of SMC, part of our endpoint protection, and part of our Safeguard Enterprise.
