## Internet Filtering with a True Appliance Solution

If you have the critical responsibility for establishing and maintaining the security of your systems and networks and enforcing your organization's Internet Security Policy and Acceptable Use Policy (AUP), iPrism, from St. Bernard Software, offers the comprehensive, cost-effective solution you require. iPrism is a dedicated Internet filtering appliance that secures your organization from Internet-based threats such as spyware, IM, P2P, and inappropriate content, at the perimeter – ensuring that your organization is able to mitigate the risks of legal liability, security breaches, the erosion of network resources and lost productivity. iPrism delivers superior security, performance and value by combining hardware, OS and application into one hardened and optimized true appliance solution.

### Highlights

- **Exclusive Kernel-Level Filtering**

iPrism's proprietary filtering technology delivers enhanced throughput without increased latency. You get the speed of pass-by technology with the accuracy and control of pass-through.

- **Most Comprehensive and Accurate URL Database**

The exclusive iGuard 100% human-reviewed database uses best-of-breed URL classification to give you the most accurate filtering solution in the industry. With millions of sites within 63 categories, you can customize to meet the exact requirements of your AUP. Your subscription includes automatic, daily database updates, with the crucial Security category, covering spyware, malware and phishing sites, updated hourly.

- **Lowest Total Cost of Ownership (TCO)**

As a dedicated Internet filtering appliance, iPrism requires no additional hardware or software. Easy to install, configure and administer, it operates virtually maintenance-free – a true savings for your IT staff and budget. iPrism and all its features are available for one all-inclusive price, no additional charge for categories such as spyware, IM and P2P. From initial acquisition through maintenance and renewal, iPrism delivers the lowest TCO on the market.

### Features

#### Completely Self-Contained Solution

The Pure-Metal Advantage is the result of combining hardware, OS and application into one hardened and optimized true appliance solution, iPrism delivers a unique combination of true security, performance and value, unrivaled by other hardware or software solutions. True security because iPrism is hardened against internal and external attacks, protecting you from Internet-based threats at the perimeter before they can damage your network. True performance because iPrism delivers proprietary kernel-level filtering - as fast as pass-by but with the accuracy and control of pass-through technology. True value because iPrism can be installed and configured easily, requires no additional hardware or software and virtually no maintenance. From initial acquisition through maintenance and renewal, iPrism delivers the lowest TCO on the market.

#### Protection Against Spyware, Malware and Phishing

iPrism gives you superior protection against the pervasive threats of spyware and malware by blocking the sites that propagate and deliver infected applications to your organization. You also get protection from sites that foster phishing attacks. This protects both your networks and employees at the perimeter before harm can reach them.

#### Block/Monitor Instant Messaging (IM)

Instant Messaging applications have become as pervasive as Internet browsers, yet pose greater risks because they typically bypass security firewalls. Not only are IM applications a risk to employee productivity, but threats such as spyware, viruses, and phishing are evolving to exploit this portal into your organization. iPrism allows you to secure your organization and employees by blocking and monitoring IM protocols across your network.

#### Block/Monitor Peer-to-Peer (P2P)

Another threat addressed by iPrism is the liability associated with peer-to-peer activity such as the illegal file sharing of copyrighted material (music, software, movies, etc.). Of even greater concern is the potential security breach that directly links the World to your

## Hardware Specification

### DIMENSIONS:

1.75" (H) x 17" (W) x 13.5" (D)

### WEIGHT:

16.35 lbs

### ETHERNET INTERFACES:

2 x 10/100 Full Duplex with Failover,  
1 x 10/100 Management NIC

### CONSOLE PORT:

1 x DB9 HyperTerminal Settings

### AC POWER:

115-230 VAC, 50-60 Hz, 4.0A @115V

### POWER SUPPLY:

150W

### PROCESSOR:

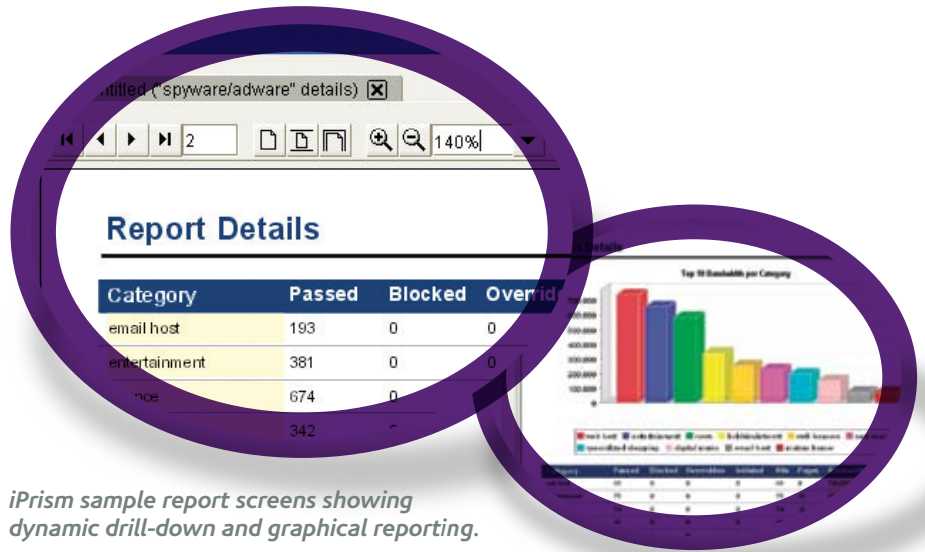

Intel P3 - 1.2 GHz, Intel 815e chipset

### DISK:

120 GB

### MEMORY:

512MB

## Features (cont.)

network via P2P. By monitoring and blocking P2P activity, iPrism secures your organization against this often overlooked security threat.

### Exclusive iGuard Database

The iPrism 100% human-reviewed iGuard database is the most accurate in the industry with millions of URLs within 63 categories allowing easy customization to fit your organization's AUP. New URLs are continually added with daily updates sent to your iPrism automatically. Critical URLs within the Security category, which includes sites known to carry spyware, malware and phishing, are updated hourly. And the iGuard database is all-inclusive – no extra charges for so-called "premium" categories. In addition, the dynamic and robust nature of the iGuard database results in the least false positives with the greatest control over URL accessibility.

### Dynamic Drill-Down Reporting

iPrism has comprehensive reporting capabilities allowing you to generate a wide range of standard or customized reports. With the new Report Wizard you can create custom reports from the ground-up or edit existing report templates to suit your requirements. With drill-down reporting, you can open a top-level bandwidth usage report and quickly isolate down to one computer to monitor activity.

### Real-Time Monitoring

iPrism provides on-demand streaming monitoring, giving you immediate visibility on Web traffic regardless of protocol used. Monitor your entire network, ranges of IP addresses, or individuals, while remaining invisible to end-users.

### High-Performance Appliances

In addition to the standard Model 1200 iPrism, St. Bernard offers the Model 3100. The Model 3100 includes all of the features of our standard model plus a gigabit interface, a faster processor, 4x the memory, RAID 1, and the ability to handle larger volumes of Web traffic.
