Symantec Mobile AntiVirus™ for Windows Mobile® – Enterprise Edition

Mobile security software that provides device-resident threat protection for on-device assets and helps to prevent the spread of threats from the device to core infrastructure Enterprise IT assets

Overview

Symantec Mobile AntiVirus™ enables secure mobile computing by providing comprehensive protection against malicious threats that target Windows Mobile operating systems. On-device, automatic, real-time scanning helps protect against threats downloaded from the Web, sent via email or a Wi-Fi connection, or received via Bluetooth® or infrared ports. Real-time auto-protect prevents incoming threats from being executed, but does log the event for administrators to track security event activity. Virus repair, quarantine and delete options enable simple threat management and removal. The wireless LiveUpdate™ from Symantec helps to ensure up-to-date virus definitions.

Key benefits

• NEW! Quarantine viruses for later review

• NEW! SMS listener allows administrators to remotely initiate select on-device actions

• NEW! Advanced event log capability allows administrators to generate an on-device .xml file that provides more detailed event logs than the on-device Activity Log

• NEW! Real-time Auto-Protect with cached scanning support

• NEW! Windows Mobile OS support

• Award-winning Symantec antivirus technologies[1] protect handheld-resident data against malicious code downloaded from the Web, sent via email or Wi-Fi connection, beamed via Bluetooth or infrared ports

• Automatic, up-to-date virus definitions via scheduled wireless Symantec LiveUpdate™

• Backed by Symantec's Security Response, the world's leading Internet security research and support organization

Key features

On-device, real-time, automatic scanning for threats

A Symantec antivirus micro-engine provides both real-time and on-demand scanning functions, as well as wireless Symantec LiveUpdate capability when wireless Internet connectivity is available.

The Auto-Protect function constantly scans and detects malicious code without user intervention, at the point of entry, before the handheld device is infected. With Auto-Protect, intercepted threats can't be opened without interaction on the part of the user who has the option of deleting or repairing the infected file.

✎ symantec™

Key features - continued

The user can select optional scanning functions, including:

• On-demand scanning

• Optional automatic scans after synchronizing with a PC or upon inserting a media card

Administrative tools:

• System Center plug-in for Symantec™ Client Security enables mobile security events to be captured to enable system and regulatory compliance

• Administrative command line tool compatible with major third-party MDMs

Benefits

• Continuous protection of data with a minimum amount of user intervention

• Comprehensive protection without affecting performance by using a small application footprint on the device

System requirements

• 780 KB of storage available on device

• Windows Mobile 2003 / Windows Mobile 2003 SE / Windows Mobile 5.0 / Windows Smartphone
