Symantec™ Mobile Security Suite

Protect sensitive data and improve corporate compliance on Microsoft® Windows Mobile® devices

Overview

Symantec Mobile Security Suite 5.0 combines mobile security and data protection in a comprehensive security suite that is unparalleled in the industry. Windows Mobile powered Smartphones and PDAs can now receive the same security technologies that organizations require on other corporate endpoints such as desktops and laptops.

Symantec Mobile Security Suite 5.0 provides protection for Smartphones and PDAs against malicious threats and unauthorized access to sensitive corporate information by utilizing award-winning antivirus technology, an advanced firewall, password enforcement, phone feature control, and encryption technology. This helps ensure both the protection of mobile assets and compliance with regulatory requirements. When used with the Symantec Mobile VPN, the Symantec Mobile Security Suite also helps ensure that only secure, policy-compliant mobile devices are able to access the corporate network via the VPN.

Symantec Mobile Security Suite provides enterprise-class management that enables administrators to centrally define and distribute security policies to mobile devices. Integration with Symantec LiveUpdate further helps to ensure timely updates of content.

Key benefits

- Unified, single-vendor solution minimizes system incompatibilities and eases installation tasks, resulting in rapid enterprisewide deployments

- Provides real-time protection from attacks, viruses, snoopware, data theft, SMS spam, and compromised devices

- Effectively and efficiently protects against mobile threats with negligible impact on mobile device performance

- Minimizes the risk associated with the loss of a device by encrypting sensitive data and logging file accesses

- Eliminates the need to manually remove SMS spam by automatically filtering and deleting messages according to configurable settings

- Limits vulnerabilities and possible attack vectors by enabling only required phone features

- Validates device compliance against corporate IT security policy and restricts access to network resources by non-compliant or potentially infected devices

- Reduces the operational costs and complexities of policy management with a centralized management console or integration with an existing mobile data management solution

Key features

- Antivirus—Real-time and prescheduled virus scanning and quarantining of infected files

- Antispam for SMS

- Firewall functionality to control inbound and outbound network traffic by network address, port, and protocol

- Data protection and loss mitigation using encryption and a file activity log

- Network access control integration with Symantec Mobile VPN

- Password management and enforcement

- Tamper protection to guard the system against attack and to ensure the integrity of software components

- Administrator-managed phone feature control

- Integration with Symantec LiveUpdate

- Enterprise management

Platform support

Mobile device

- Microsoft Windows Mobile 5
- Storage
  - Pocket PC: 4.6 MB
  - Smartphone: 4.2 MB

Enterprise manager

- Minimum 400-MHz processor or higher
- Minimum 256 MB, additional recommended
- Minimum 120 MB free disk space, 250 MB expected usage
- Operating system:
  - Microsoft Windows® 2000
  - Microsoft Windows XP
  - Microsoft Windows 2003 Server
- Database:
  - Microsoft SQL Server 2000 Enterprise or Standard Edition, SP4
  - Microsoft SQL Server 2005 Enterprise, Standard, or Workgroup
- Microsoft Internet Explorer® 5.5 or higher
