# Symantec™ Protection Suite Advanced Business Edition

Protection that goes beyond anti-virus and endpoint security

Overview

Symantec Protection Suite Advanced Business Edition is an "all-in-one" suite that protects critical business assets by securing against today's malicious malware and spam threats as well as by rapidly recovering key systems when problems happen. It is the industry's first business security suite that combines endpoint, email and data protection with server backup and recovery capabilities. With award winning technologies from the market-leading endpoint security, messaging security, and backup and recovery vendor, Symantec Protection Suite Advanced Business Edition keeps your key desktops, servers and core applications running. It enables fast data and system recovery to ensure your core infrastructure and mission critical applications are readily available at all times. As your business evolves and as your network grows, Symantec Protection Suite Advanced Business Edition can scale with you, by easily adding next-generation Symantec security technologies to completely protect the most crucial assets to your business, while balancing performance, ease of use and costs.

Symantec Protection Suite - Protection right-sized for your business

ENDPOINT PROTECTION   DESKTOP BACKUP & RECOVERY   SERVER BACKUP & RECOVERY   ADVANCED MAIL SECURITY

Information Protection for Business Continuity

SYMANTEC™ PROTECTION SUITE ADVANCED BUSINESS EDITION

Advance your business protection with the new Symantec Protection Suite Advanced Business Edition. It offers end-to-end, continuous protection for your business systems – without the cost and complexity of big business suites. Avoid both point-solution gaps and enterprise-scale overhead and expense with the industry's only all-in-one security and availability solution. Advanced protection is easier than you may think.

Key Benefits—Symantec Protection Suite Advanced Business Edition

Complete Protection - Delivers multiple layers of protection for your business

Protect your entire infrastructure against more threats—Secure endpoints, messaging servers, and gateways proactively with more than traditional antivirus and antispyware to protect against many more of today's threats.

Recover Data, Desktops and Servers completely—Recover individual files and folders in seconds or complete Windows systems in minutes when problems happen, even to dissimilar hardware or virtual environments.

Safeguard intellectual property—Secure sensitive data and valuable confidential information at the gateway with advanced content filtering and data loss prevention.

Ensure Business Continuity - Keeps mission critical systems running smoothly in case of disruption

Maintain business uptime—Have confidence that your business will go uninterrupted by security and system problems, since your assets will be protected by proactive system protection, data protection and reliable, automated backup and recovery.

Optimize performance—Free up server resources and increase performance by eliminating spam and email threats before they reach your key messaging servers.

Confidence in a connected world.

symantec.

Rely on trusted research—Proactively protect your business using real-time security intelligence from Symantec Global Intelligence Network, the largest security research network in the world.

Easy Management - Provides simple management to help you scale

Integrated endpoint security—*Deploy* unified endpoint security technologies with options that assure affordability today and scalability tomorrow.

Simple implementation—Quickly deploy with minimal disruption to your environment through easy Management, fast deployment single sign-on capabilities and optimized utilization of system resources.

Central management—Simplify IT administration by centrally managing backup, recovery and critical security tasks across your entire organization.

Key Features—Symantec Protection Suite Advanced Business Edition

Endpoint Security - More than antivirus

• Protect against more threats using Symantec's industry leading integrated endpoint protection technologies including antivirus, antispyware, desktop firewall, intrusion prevention, application control and device control technologies

• Save time and money with easy product installation, including the ability to deploy your endpoint protection environment in under 20 minutes, with self-guiding wizards for easy setup and configuration.[1]

• Adapt to risks faster and take action within minutes with the Symantec Global Intelligence Network

• Antivirus for Linux and Macintosh—Comprehensive virus protection against malicious threats that target Linux and Macintosh systems.

Messaging Security - Effective protection against new messaging threats

• Protect against inbound and outbound email and instant messaging (IM) based threats, enabling businesses to secure vulnerable messaging systems.

• Simple to administer, effective, and accurate, catching more than 99% of spam with fewer than one false positive per million messages.

• Advanced content filtering and data loss prevention technology ensures your sensitive customer and business information is not sent out over the Internet; meeting regulatory compliance, reducing your legal risk – and preventing the loss of important business data.

Backup and Recovery - Industry first security suite with backup and recovery

• Ensures that your business assets are protected against failures or new security threats, including automated, event-driven backups triggered by Symantec's Global Intelligence Network information.

• Easily restore entire systems back to an exact point-in-time, even to dissimilar hardware, without the need for manual and lengthy error prone system rebuilding.

• Centrally manages backup and recovery tasks for multiple desktops, laptops and servers across your entire organization.
