*Offered in North America only

Trend Micro™ PC-cillin™ Internet Security 2006

combines award-winning antivirus security with personal firewall protection to block all types of viruses, worms, Trojans, and hackers. It also identifies and removes spyware, blocks spam, and guards against phishing and pharming attacks—scams designed to steal credit card and bank account numbers. Plus, it protects your wireless network by alerting you when an intruder uses your Wi-Fi connection.

SPYWARE

TROJANS

VIRUSES

WORMS

HACKING ATTACKS

Comprehensive Antivirus Security

PC-cillin detects and removes viruses from emails, Internet downloads, removable media, and your PC. The improved Outbreak Warning System alerts you of new threats, and security updates are automatically deployed as soon as they are available.

Powerful Spyware Protection

Advanced anti-spyware technology blocks all types of spyware and grayware in real time. Plus, manual and scheduled scans detect and remove spyware that is already installed on your PC. New Exception Lists and improved Quarantine Management give you more control to keep, delete or restore programs.

Phishing Fraud Defense

URL filtering, anti-spam, and patent-pending technologies work together to block fraudulent Web sites, phishing emails, pharming attacks, and other Internet scams.

Wi-Fi Intrusion Detection

The industry's first alert system for wireless home networks is now faster and better, sending rapid alerts as soon as an unauthorized user invades your wireless network.

Enhanced Personal Firewall

The personal firewall prevents intrusion from hackers and blocks network viruses that target network vulnerabilities.

Vulnerability Assessment

PC-cillin performs regular scans of your computer, alerts you to operating system/browser vulnerabilities, and provides one-click access to Windows Update.

Home Network Control

A centralized management console makes it easy to configure, update, and manage all aspects of security for every PC on your home network—wherever PC-cillin 2006 is installed. A new Security Expert Services* button links to a security blog, virus maps, and other tools to give you all the information you need.

Improved Spam Filtering

Advanced spam-filtering technology blocks spam from flooding your inbox, and new integration with Microsoft™ Outlook™ makes it easy to set preferences. Plus, new user-friendly tools and more reports make it very simple.

Advanced Parental Controls

Parental Controls allow you to manage your children's Web activity by blocking Web sites and inappropriate content.

*Offered in North America only

For PC-cillin 2005
