

Veeam Backup & Replication

Veeam Management Pack for System Center

Veeam offers two editions of Veeam® Management Pack™ for System Center.

Feature	Enterprise	Enterprise Plus	Benefits
Topology views of storage, network and compute	✔	✔	Maps relationships and dependencies between physical and virtual resources to show how problems affect your business.
Monitors for performance, events and Availability	✔	✔	See what's going on in your environment with real-time data, monitoring and alerts to help you meet service levels and eliminate problems.
Report templates	✔	✔	Analyze the health and performance in reports you create.
Advanced dashboards	✔	✔	Get real-time performance views, customizable heatmap widgets and on-demand top dashboards with "traffic lights."
Integration with Microsoft Operations Management Suite	✔	✔	Out-of-the-box Microsoft Operations Management Suite (OMS) integration. Leveraging the dashboard capabilities within OMS and delivering on-premises Veeam MP health status data and resource usage visualizations into a single, unified view within the OMS console.
VMware Virtual SAN Alarms Management Pack	✔	✔	vSAN and vCenter Alarm support for vSphere 6.5 and vSAN 6.6. Proactively track individual vSAN health checks and assess overall health of vCenter services.
See status of ESXi services	✔	✔	Additional to the existing Host Security Profile tracking, this on-demand view allows Operations Manager users to confirm the status of all running and stopped services on the ESXi host.
Monitors for custom vCenter Alarms	✔	✔	Easily configure Veeam MP to monitor your custom vCenter Server alarms.
Built-in knowledge base	✔	✔	Decrease time to resolution, with expert guidance. Provides context to warnings and alerts, and offers corrective actions.
Host Security Profile reporting for vSphere		✔	Enterprise only supports Show ESXi host services state task. Enterprise <i>Plus</i> tracks and reports security setting changes.
Capacity planning for hybrid cloud		✔	Analyze your on-premises virtual workloads to see equivalent needed Microsoft Azure or VMware vCloud Air resources.
Resource right-sizing		✔	Right-size your over/undersized VMs based on peak and average utilization.
Configuration tracking and alert correlation		✔	Determine whether configuration changes triggered specific alerts, so you can resolve problems faster.
Morning Coffee Dashboard®		✔	Get at-a-glance, real-time status of your virtual infrastructure including Veeam Backup & Replication™ environments. Plus, you can easily stream this information into Microsoft OMS for a unified view of your overall resource utilization.
Snapshot Summary Report		✔	Quickly determine snapshot aging, owner and justification.

Feature	Enterprise	Enterprise Plus	Benefits
Capacity planning and modeling		✓	Use "what if" modeling and trends to predict future needs, including when you will run out of storage.
Idle VM discovery		✓	Reclaim wasted resources from idle and powered-off VMs.
Availability and protection status		✓	Know which Veeam backups have valid recovery points, identify VMs that lack proper backup protection and see Veeam SureBackup® verification.
Restoration Activity		✓	See all valid Veeam backup recovery points for backup protection, including Veeam SureBackup verification.
Top troublemakers		✓	Finds the noisy objects that generate the most alerts.
Veeam Collector auto-deployment for vSphere		✓	Simplify installation for faster deployment to even the largest environments.
Failover data collection for vSphere		✓	Guarantees delivery of monitoring data with full redundancy of collectors, adds failover and load balancing.

✓ Fully supported
