

# Introducing EVO:RAIL

VMware's first hyper-converged infrastructure appliance.

EVO:RAIL is everything you need for a software-defined data center in a 2U chassis.

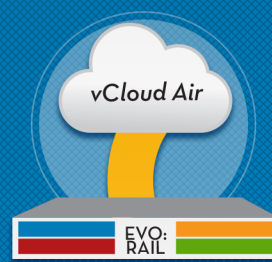

## EVO:RAIL USE CASES

**VIRTUAL DESKTOPS**  
Deploy hundreds of virtual desktops in minutes on one appliance

**SERVER WORKLOADS**  
Standardize and consolidate data center infrastructure for all your workloads

**HYBRID CLOUD**  
Seamless backup and replication to the cloud

**REMOTE/BRANCH OFFICE**  
Manage and orchestrate across locations with no downtime

## RADICALLY SIMPLIFIES YOUR DATA CENTER

- Orchestrate and automate the entire VM lifecycle
- Single pane of glass with easy-to-use UI
- Scale out in minutes
- Easy maintenance

## ENSURES TOP PERFORMANCE

- Fast time to value
- Cloud ready
- Flexible hardware configurations
- Best-in-class VMware technologies

## LOWERS YOUR COSTS

- Small 2U footprint saves space and cooling
- Standardize and consolidate your data center
- 75-90% fewer steps at all phases
- Leverage existing licenses

## REDUCES YOUR RISK

- High resiliency with 4 independent server nodes
- Security best practices built in
- Fully tested and integrated
