

Harmony Email & Collaboration CheckUp

Over 90% of attacks against organizations start from a malicious email.

Since email attacks usually involve the human factor, your Microsoft 365 and Google Workspace environments are your organization's weakest link. Closing this security gap requires protections from various threat vectors: phishing, malware, data theft and account-takeover.

The best way to troubleshoot cyber security is with a no-cost Email & Collaboration Security CheckUp from Check Point. Our experts will analyze your network and collect comprehensive data on active threats to your complete environment including:

- Sophisticated phishing attacks
- Malware attacks
- Data leak events
- Account takeover events
