ZONES™

Wireless Infrastructure and Mobility Solutions

Versatile technology for dynamic computing

Access, Connect, Interact and Respond

Wireless and mobility solutions empower your employees to conduct business anytime, anywhere, from any device delivering key capabilities: application access, business insight, communications, collaboration, and business awareness. The IT infrastructure for wireless and mobile computing spans the spectrum of network capabilities: wired and wireless IP networks, unified communications, and location tracking solutions, each of which has integral security capabilities to protect both the device and the enterprise network.

Zones partners with leading software and hardware providers to deliver secure, flexible, scalable, efficient, and high-performance solutions. We can help architect easy-to-access and easy-to-use connections to drive quick adoption of your wireless and mobile infrastructures. Business gains include lower operating costs, and helping your employees find, reach and collaborate smarter with others both within the organization and with your customers.

Wireless Infrastructure & Mobility Solutions

Effective business interactions are critical to helping your employees be more productive and providing your customers with quality service. By harnessing collaborative power at every level, you make interactions more efficient. Integrating wireless and mobility solutions into your business processes can improve productivity and much more, including realizing significant bottom line benefits.
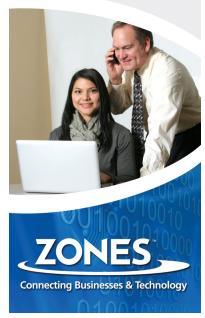

- Freedom and flexibility of employees having full access to real-time and up-to-date data enables better decision making out in the field or on site in front of your customers.

- Respond to customer requirements without geography or time restrictions by empowering employees away from the office with continuous access to enterprise information.

- Reduce overall IT operating costs by leveraging your existing network infrastructure; easing administration; consolidating reporting; and conducting dynamic user moves, adds and changes.

- Gain installation speed and simplicity with network scalability. Eliminate the need for physical installations of networking gear, new cable runs, physical modifications to your real estate, or changes in the wiring closet or data room.

- Plan for future business growth with a scalable solution. Wireless LAN systems can be configured in a variety of topologies to meet the needs of specific applications and installations. Configurations are easily changed and range from peer-to-peer networks suitable for a small number of users to full infrastructure networks of thousands of users that enable roaming over a broad area.
